Abstract

Virus fighting are going to become a common and convenient means for human to will be survived. More-and-more Viruses are kept on arriving over the world, forcing human to increase the set of knowledge and using intelligent data to predict and decide more accurately and correctly. The availability of different new viruses increase the complexity of discovery as well as the selection process to overcome them. In this research we are sharing our results from data science to fight against the new generation of viruses. Our data consist of human body to observe calcium and etc.. At the end we try to offer the ways which human can fight with these viruses. By decreasing the probability of increasing human's immunities body and some other useful ways. In addition Long and healthy life are going to become a common and convenient means for human to will be survived. More-and-more health problems are kept on arriving over the world, forcing human to increase the set of knowledge and using intelligent data to predict and decide more accurately and correctly. The availability of different new health problems increase the complexity of discovery as well as the selection process to overcome them. In this research we are sharing our results from data science to fight against the new generation of health problems by using stem cells and at the end we try to offer the ways which human will be able to live longer and healthier. By using reliving stem cells in the body and also some other useful ways.

Keywords: Antivirus; Vitamin D; Virus Fusion; Olive Leaf; Antioxidant; Antiviral; Antibacterial; Blood Pressure; Immune System; Liver; Obesity Our; Electro Static; Leech Therapy; Calcium; Magnesium; Potassium; Stem Cells; ABAR1 Enzyme; MSI-1436

Introduction

When the body starts fighting with viruses, if the body is not able to win, the immune system makes a substance called (Tumor Necrosis Factor) TNF. At the same time white blood cells produce Immunoglobulin. At the first they produce IgM. By the CSR process IgM will be changed to IgG which its duty is to go and attach to antigens such as viruses and by its transparent destroy viruses. By producing more Immunoglobulin the prothrombins convert to thrombins. More and more thrombins make the blood clot. More blood clot makes the hearth to bit more and more hearth bit produce BNP enzyme and more BNP makes lung problems, lung problems, make hearth bit more and more BNP, more lung problem again and

again. More hearth bit makes less oxygen and more blood sugar, more blood sugar makes the blood clot more, again more hearth bit shown in figure 1. At the first attack of new generation of viruses (NGV) most of people died because of blood clot. The blood clot can make death by heart attack, brain attack, lung problems, and etc. in this condition any TNF inhibitor like Dexamethasone, which decreases the power of the immune system, helps the body to produce less thrombin so blood clot will be decreased. The number of death due to blood clot decreases by this solution. On the other hand by decreasing the power of immune system, we let other viruses be more active in the body. From this point, our story will be started.

Question why the body cannot defense properly? Our answer to this question is very easy, because the body is too weak and too lazy. Question why our body is too weak and too lazy to defense against the new generation of viruses? Answer, because we have made the human's body lazy. Question how we have done it? When scientists started to find exact chemical substance from the plants. The story has begun since the scientists tried to eliminate plants, to cure illness. Instead they tried to find exact chemical substance inside the plants which is useful to cure the illnesses. For example they studied if someone has got problem with his bones. Doctors should write a prescription with calcium drugs. Afterwards these patients not only have not been cured but also felt more problems such as closure of their vanes, or some kind of bone shapes in wrong places in their body such as in their Benet of their foots or their hands with ace. Then after a lot of experiments they realized that the body needs vitamin D, to be able to absorb the calcium. So the Doctors this time in their prescriptions, when they ask their patients to take Calcium, they add vitamin D such that the body be able to observe the calcium. This understanding at least takes 10 to 15 years. What happened in this period of time to human's body? Because of wrong prescriptions their body became weaker; lazier. But the story did not finish here, another 10 years passed and intelligent Doctors understood that vitamin D can cause kidney stones. What is the solution after making human's body weaker; lazier than before, after experiments thinking writing papers, publications they understood that, they should give not only vitamin D but also Magnesium, such that the body can observe the calcium, and not making kidney stones, because of vitamin D. now after another ten years they will understand they should add another thing to this combination such that another problem does not take place in human's body. Hence firstly if the doctors instead of investigation and experiments to solve the solved problems, it is better to think about the solution of new problems. One may ask but it is not solved problems, our answer is YES all of these problems have been solved by the Nature. If you are taking milk which has calcium, you have to take date or banana with it such that the calcium in the milk will be able to be observed by vitamin D, magnesium; potassium; etc... with sufficient amount of these substances which are accurately, completely and intelligently, are available in them.

This new viruses in the body makes fusion. The NGV fusion to other kind of viruses which were no danger to human, makes it dangerous. When NGV combine with traditional viruses (TV) the new generation of viruses from traditional kind of viruses will be

appeared in the world NTV. As you know in the world the L type of corona virus exist for long time in the world. When the S type of corona virus starts to kill human since 2019 the L type dose not kill anybody. Later on after fusion the L type started to kill human more dangerous than the S type. Doctors said there is two types of it. But actually human should be ready for more than 1000 types of NGVs. Why the NGVs are able to make fusion in our body? The answer to this question is as much easier as previous question, the reason is because of the existence of the electrostatic in the body. Who has made these electrostatic in our body, answer is ourselves by using the new instruments which human made it. How we can solve this problem by not using these products? Answer is NO, we can use these products, but we need to discharge our body at least 5 to 10 times per day. To overcome this new generation of virus attack, we should use plants because plants are more available and agree with nature. They are also far from the harms of using chemical drugs, as described earlier, Olive leaf is one of the herbal remedies that has long been available in the form of treatment and in people's food basket. Consumption of olive fruit has long been of special importance among communities, especially in the Mediterranean region. Also, the oil of this fruit has far more benefits than animal oil. Another widely used part of this plant that has received less attention is the olive leaf. Olive leaf, like its fruit, has many uses and benefits. From ancient times, olive leaves have been used to treat many diseases. Olive leaf smoke has also been used to disinfect places. In fact modern laboratory studies indicate the antibacterial, anti-inflammatory and antioxidant properties of olive leaf. Olive leaf is responsible for a wide range of therapies. Olive leaf can fight viruses because of its properties, so it is very suitable for viral diseases. One of its types is herpes. Olive leaves are also very useful in treating obesity, controlling blood pressure, diabetes and cancer. There are subclasses of viruses in the world, including smallpox, chicken pox, influenza, Ebola, mumps, AIDS, SARS, viral plant diseases, herpes simplex diseases, animal viral diseases, dengue fever, yellow fever, tuberculosis, influenza, Redness, viral infections of the respiratory tract, viral infections of the central nervous system, types of hepatitis, genital herpes. Kind, because any virus fusion in the body makes new kind of NTVs. In this study we are going to introduce some of ways to predict virus fusion. Predict the human on more risk and the solutions. Also In this article, we try to explain about stem cells and their types and then the process of human progress in obtaining stem cells and using them. In the following, we will compare the different paths that a stem cell becomes into a target cell, such as muscle cells, the heart, or neurons in the brain,

etc. We will compare the different pathways in which a stem cell becomes a target cell or a cancer cell. Results of Human Findings in Year 2010 on how to put stem cells in the right direction, with the most surprising human findings on how and how easily traditional medicine turns stem cells into target cells and longevity It normalizes cells many times over (given that researchers have no knowledge of Iranian traditional medicine.) Stem cells are cells that have the ability to become any other type of cell. Stem cells were first found in the embryo, which had to destroy the embryo to obtain the stem cells. Later, when artificial insemination was introduced, after fertilization of the fertilized egg in the uterus, additional fertilized eggs were used for this purpose. Scientists have long found that stem cells also produce stem cells when obese people undergo abdominal suctioning. With the advancement of science, it has become very clear that stem cells are present in all parts of the body. For example, in muscle cells, there are many muscle cells that do not have the ability to transform, but there are also a small number of stem cells that are activated in women and then become muscle cells and replace the destroyed cells. It turned out that there are two types of adult and embryonic stem cells. Knowing that the next question that arises is how to stimulate stem cells to start working to transform into other cells and proliferate.

Related works

There is a lot of valuable works in this area. This is the time to not to compete but help each other to find the best solutions.

Discussion

First step of fighting against New Generation of Viruses (NGV) is to live correctly it means do not using the prescriptions such that encourage us to use chemical drugs such as calcium to make your bones stronger now a days we know it is wrong enough to make us defeat from virus war easily. But why here again we are giving you the said example in earlier part.

When scientists started to find exact chemical substance from the plants. The story has begun since the scientists tried to eliminate plants, to cure illness. Instead they tried to find exact chemical substance inside the plants which is useful to cure the illnesses. For example they studied if someone has got problem with his bones. Doctors should write a prescription with calcium drugs. Afterwards these patients not only have not been cured but also felt more problems such as closure of their vanes, or some kind of bone shapes in wrong places in their body such as in their Benet of their foots or their hands with ace. Then after a lot of experi-

ments they realized that the body needs vitamin D, to be able to absorb the calcium. So the Doctors this time in their prescriptions, when they ask their patients to take Calcium, they add vitamin D such that the body be able to observe the calcium. This understanding at least takes 10 to 15 years. What happened in this period of time to human's body? Because of wrong prescriptions their body became weaker; lazier. But the story did not finish here, another 10 years passed and intelligent Doctors understood that vitamin D can cause kidney stones. What is the solution after making human's body weaker; lazier than before, after experiments thinking writing papers, publications they understood that, they should give not only vitamin D but also Magnesium, such that the body can observe the calcium, and not making kidney stones, because of vitamin D. now after another ten years they will understand they should add another thing to this combination such that another problem does not take place in human's body. Hence firstly if the doctors instead of investigation and experiments to solve the solved problems, it is better to think about the solution of new problems. One may ask but it is not solved problems, our answer is YES all of these problems have been solved by the Nature. If you are taking milk which has calcium, you have to take date or banana with it such that the calcium in the milk will be able to be observed by vitamin D, magnesium; potassium; etc... with sufficient amount of these substances which are accurately, completely and intelligently, are available in them. Our question is very easy when the nature has produced complete drugs for your diseases with exact amount of each required substances, which not only harm you but also cure you correctly. Not curing you then afterward you see, OH MY GOD, now I have kidney stone or etc.. next what we shall do is nothing but to decrease the blood clot, due to increase of immunoglobulin produced by white blood cells which force the prothrombins (prothrombin is electro-negative in blood and directly proportional to blood clot) convert to thrombins (as thrombins increase, blood clot increase). This problem can be solved by reduction of power of the immune system (for example using Dexamethasone), such that less immunoglobulin produce in the body. Less immunoglobulin, less IgM, less IgG, less conversion of prothrombin to thrombin, less thrombin, less blood clot. Less blood clot will help the number of the death become less. Is it correct solution?

It means look like when somebody went to 35th floor of a building to suicide. Then the rescuers ask him to please tie a powerful cable to him, and they ask him come on jump to come down and die, we also helping you to crash the ground more dangerously be-

cause we are also pulling the cable more powerful and faster. So to solve the blood clot is not using the drugs such that make reduction of power of the immune system (for example using Dexamethasone). The solution is to solve the blood clot, by making another dangerous problem to the body. For this solution we can use Olive Leaf such that not only solving blood clot but also increasing the immune of the body, or there is at least 19 other solutions to solve it correctly, but we do not understand why the Doctors are solving the problems such that making another worse problem! next step starts when human's power of the immune system decreases, at this point other viruses can easily activate in the body because of shortage of fight against them. Now we have NGV and traditional viruses at the same place. By fusion between this two we can see newborn of traditional viruses, but very dangerous than previous ones NTV. As an example, L type of corona virus. What can we do to stop fusion of viruses in our bodies? The speed of fusion can be increased by electrostatic. We can decrease the electrostatic in our body by discharging it. As a matter of fact if even one person do not take care of himself/herself he/ she will help to generate new kinds of dangerous viruses in their body and transfer it to other people. These NTVs try to change our DNA. By decreasing the toxins in the body, we can prevent them for doing their duties. Mercury, lead, arsenic, heated plastic, Teflon, flu vaccine (because of having mercury) tooth paste any not organic man-made has Toxin. Toxins location is fat cells, so fatness also is dangerous. The blood type O has two kind of antibodies which make the immune system more powerful plus that the factor of Alfa2M makes the blood type O not to be clot easily. The blood type O is the first blood type of human beginning. Later on the human's blood type of A, B, AB consequently appeared in the world. As you know the blood type AB does not have any antibody plus that their blood going to be clot (same as blood type B) faster than other blood types. So as time passes the human's living kind changed to unnatural their blood changed to worse. As the newer blood types appear the human immune system power decreases and their blood become faster clot, it means they catch more diseases, they are angrier, they are dyeing more from heart attack, and etc. because of their blood type become clot faster. This shows us living in nature and eating natural foods and etc. is better not only by this reason but also because living naturally makes less Toxins to decrease Toxins is breathing, by breathing we can vanish up to 70% of Toxins in our body. Other useful factors are discharging the body from electrostatic such that prevent the fusion inside our body. Since the earth is under magnetic attack now a days discharging the body 7 times or more per day is

required. Even if one person do not take care of himself/ herself by living naturally eating natural foods discharging and etc. make his/her body good target to make the NTV inside it and transfer it to others and kill others without knowing what he/she dose. We are at the very early of long war against NTVs. Blood clot is directly proportional to the following factors: vitamin K because of hypoprothrombinemia which act same as prothrombin in the body, fibrinogen, platelet, factor 8, factor 7, factor 2, not digested calcium, lipids, electro-negative, protein diet, tropin C, tropin T, tropin I. Blood clot is indirectly proportional to factors such as vitamin. In addition E (because of anti-heparinic, antioxidant), chymotrypsin, and vitamin D (because of digesting the undigested calcium), manganese (because of digesting the undigested calcium), electro-positive, alfa2M (exist in the blood type O), vegetable diet, sun shine (because of digesting the undigested calcium). The ways we can prohibit blood clot are: drinking more water, taking more kiwi, garlic, olive oil, nuts (more vitamin E), honey, green vegetables, carrot and fruits. Not to take beef, scraped, brain, caviar, full fat cheese, chicken, kidney, liver, lungs, tongue, bone marrow, butter, chicken fat, goose fat, peanut butter, brazil nuts, dry beans, green beans, dry peas, green peas [1-6]. Reference to "To be or Not to be after Virus Attack, Acta Scientific COMPUTER SCIENCES, Volume 2 Issue 9 September 2020" In addition Human have been fighting viruses for thousands of years. The new virus is no exception to this rule. In recent decades, several viruses have been transmitted from animals to humans and have claimed thousands of lives, including the Ebola virus, which originated in 2-5 in West Africa. An outbreak has killed 9.8% of infected people, making the virus the deadliest member of the Ebola family. There are other viruses as much or even more deadly, including the coronavirus, which currently infects and kills a number but still has a lower rate than other dangerous viruses. But due to the lack of confrontation, it is still a serious threat. Olive is a tree that is found in most climates and is easily accessible to the general public. It is very easy, convenient and cheap. Also, according to the uses of olive leaves that we have mentioned and its inclusion and generality of its properties and its uses, simplicity, convenience, cheapness and availability, the use of olive leaves is more justified. One of the big problems with chemical drugs is their side effects, and that chemical drugs often have no healing power and are only used to control the disease. The use of olive leaves also prevents the waste of financial resources of governments and individuals and by creating a high level of health in communities. Olive leaf is a very strong antibacterial and antiviral. It strengthens the immune system. It warms the brain. Prevents in-

fections. Eliminates toxins (or soda) It eliminates infections and It is an antioxidant. Olive leaves are even more effective than olive oil. Olive leaf smoke can be used to disinfect and clean indoor environments. "Anti-cancer effect of olive leaf extract" In studies on the lives of people in the Mediterranean, scientists have found a longer life expectancy and a lower incidence of cardiovascular disease and cancer in the people of this region. The polyphenols in olive oil play an important protective role in the body's health and fight against cancer. But here it is necessary to say that the amount of polyphenols in olive oil is very low. In contrast, the amount of polyphenols in olive leaf extract contains a high amount and variety of polyphenols. There are also many structural differences between olive oil versus olive leaves. The polyphenols in olive leaves play an important role in the fight against cancer and inflammatory diseases, and protect DNA damage caused by free radicals, thus preventing negative genetic changes and breaking the chain of many genetic diseases. In this case, the use of olive leaf extract has an effect on treatment and prevention methods. The European Food Safety Authority has emphasized that olive leaf polyphenols help protect blood lipids from oxidative stress. Due to the cultivation of olives in areas with more sun, olive trees synthesize high amounts of polyphenols stored in their thick leaves. The concentration and variety of polyphenols will be affected by many factors such as geographical location, tree cultivar and Tree age. Polyphenols include different phenolic groups, each of which consists of an aromatic ring with a number of hydroxyl groups. Polyphenols are often transported conjugated with one or more hydroxyl sugars. The main phenolic compounds are iodide sequoids and flavonoids that have been shown to be effective in inflammatory and metabolic biomarkers in humans and animals. Also, the effects of olive leaf include its effect on type 2 diabetes, high blood pressure, obesity, boosting the immune system and being rich in antioxidants. Remdesivir (GS-5734) is a drug that is prescribed for patients with new virus and has good results. Formula; GS-5734. After entering the cell, the drug converts to GS-704277 and then GS-704277 converts to nucleoside monophosphate and then to nucleoside triphosphate. It works inside the cell as the inhibitors of RdRp and prevents the proliferation of new virus inside the cell. Instead, olive leaves can be used because this substance is known in olive leaves as antiviral it means Olive Leaf itself has the nucleoside triphosphate. you know why, I tell you why they are selling us Remdesivir very expensive and it is not find easily in poor countries, now suppose it becomes very cheap and available around the world. ask me why? Suppose you want to eat one spoon of soup then instead of

taking your food as normal, you try to take the spoon over your neck and then take it, it is very similar to take Remdesivir instead of Olive Leaf. Because Remdesivir after 3 or four times changing in formula becomes the nucleoside triphosphate but the Olive Leaf has the nucleoside triphosphate and we are able to use it directly. The scientists again did a lot of experiments after 500,000 people dead they suddenly realized that vitamin D is very useful to cure patients affect by NGVs. so they advise patients to take vitamin D plus Remdesivir. OK I am going to tell you after any 1000,000 dead what the intelligent scientists are going to tell you by a lot of experiments suddenly, if you find the different substances inside the olive leaf for example first they said nucleoside triphosphate but they put it in the Remdesivir and the people thought the scientists are from the god after 500,000 people dead they said vitamin D so we gave you the key after any 500,000 people died they are going to tell you another thing which exist in the olive leaf. Also they have done lots of researches and spend lots of people taxes to find why blacks are dying more than whites in UK. Then after spending lots of money and time they said the reason is poverty. The reason is, because in the same angle of sun shine black skin can absorb 1/10 of vitamin D as white skins can absorb. To answer easy question they consume a lot of people taxes as research budget, at the end the research's answers are as illogical as a 7 years old primary school laugh on their result of researches. Ok up to know it has been proved that chemical drugs not only is useless but also it is harmful to your body. Next we proved scientists just consume your taxes paid by nations and also you yourselves can find what the scientists will tell you after lots of people die. Ok nutrition in medicine is a key to any diseases forget about human made chemical medicine for your health. Now to give you a key to divide the nutrition plants, we divide these to H groups and C groups. C groups are those plants which make people mostly sick (it depends on people) these plant and foods have calcium and vitamin K. in Other hand the foods with vitamin D, magnesium and vitamin E are H foods. To make plants, foods, sands, pictured on a unit scale we made a new scale. In this scale C is in negative part of H scale and W foods are moisture foods. So we pictured everything in this new scale. I am going to give you another key to solve any diseases in the world. You see some diseases can kill more human when there is less sunshine so this disease can be cured by H nutrition (because the disease is in the negative side of H). if you want to cure virus attack, we use antiviral nutrition such as Olive Leaf, any antiviral nutrition plus antiviral substances inside it, has got also vitamin D, Magnesium, because to kill viruses it should make body more powerful by

destroying the undigested Calcium which makes ache and powerless in the body. Olive leaf has other effective substances such xanthine oxidizes causes oxidation of hypoxanthine to xanthine, xanthine is converted to uric acid, and uric acid is converted to superoxide radicals and hydrogen peroxide (during oxidation) and it causes many diseases, including cancer. But olive leaf has anti carcinogenic properties that purify the metabolic enzyme and its effect on the body. As you know, to treat the President of the United States, to use vitamin D and Remdesivir drug, which is the nucleoside of phosphide. In fact, these two substances are effective in healing them naturally in olive leaves. Olive leaves contain Oleuropein, Liks trosayd, Oleuropein agrikon, Course setting, Isorhamnetin and etc. These substances are effective as anti-carcinogenic as well as anti-oxidant, anti-microbial and anti-inflammatory. Another substance found in olive leaves that is high in hydroxytyrosol, which helps prevent breast cancer. Olive leaves have been used as a remedies for many years [8]. As explained above, the main factor preventing the virus from replicating in the body is the more nucleoside phosphide and the combination of D-c, which can be used both chemically and in the immediate and natural form of olive leaf cigarette smoke. Vitamin D not only eliminates unabsorbed calcium in the body, but also prevents viral diseases such as colds, flu, allergies, bronchitis, etc. This is because the presence of vitamin D in the lungs kills viruses and germs that enter the body through respiration. Research has shown that the lungs prevent viruses and germs from entering the body by producing vitamin D. Therefore, vitamin D boosts the body's immune system [7]. At this point we are going to give a newer results of our researches. At the point of blood clot at the beginning of the virus fighting in the body we can use Olive Leaf Extractor to stop blood clotting. To prevent the virus to settle down in the lung we can use Olive Leaf Cigarettes, to power the lung to kick the virus out of the lung. In the case the virus enter the body the Olive Leaf Extractor prevent the viruses to create more viruses in the cells by the existence of nucleoside triphosphate and vitamin D in the Olive Leaf Extractor. In addition we should add that there are various factors that will be mentioned in the supplementary explanation, and the second question is that after stimulating stem cells to proliferate and become the desired cell, such as muscle cells, heart cells or neurons in the brain, etc. or cells? Will the stem cells become the best in that cell or do you need other care? When a person gets angry, the first spark of anger stimulates a gland in the brain called the amygdala. Stimulation of these glands stimulates the hypothalamus in the brain. Thus, the hypothalamus sends a message to the pituitary glands by secreting the

hormone corticotrophin. The pituitary gland secretes adrenocorticotrophic hormone by activating the adrenal glands, and eventually stress hormones such as cortisol adrenaline and noradrenaline are secreted by the adrenal glands in the body. Increased levels of the hormone cortisol in the body cause too much calcium to be absorbed by neurons in its membranes, causing the cells to burn and die repeatedly. Elevated cortisol levels make the hippocampus and front of the brain the most vulnerable parts of the body. As cortisol levels rise in these areas, a person has difficulty making decisions as well as planning for the near or distant future. * (Compare with when we think or act positively) which we will have a comparison in the next pages. Increased levels of cortisol in the hippocampus cause the destruction of neurons in this area and lead to disruption in the production of new neurons. This is the same negative effect on the process of converting a stem cell into a negative and harmful cell. In this case, it was found that a stem cell, after being stimulated in different pathways to become the desired cell, undergoes the process of DNA completion and modification. Sometimes in the process of turning a stem cell into a target cell, for some reason, instead of turning into a useful cell, it turns into a cancer cell. As a result, after stimulating the embryonic or adult stem cells in the body to regenerate new cells, the conversion pathway must be taken care of so that the result is a defective cell and in some cases even better than the original cell. Various pathways examined in terms of biochemistry and other sciences and the result (without researchers' knowledge of traditional Iranian Islamic medicine) * How to stimulate embryonic stem cells or adult stem cells in the body to proliferate and transform To do the destination cell correctly? Stem cells are the only type of cells that have the ability to amplify and alter their DNA. Stem cells attach themselves to problem cells by replicating, transforming, and replacing themselves with problem cells. If we insert embryonic stem cells taken from human embryonic cells or from a person's deciduous teeth that have been stored under special conditions and conditions into the person's body, the spontaneously rotates to the area where the damaged cell is damaged and sticks. These cells proliferate and replace them. Embryonic stem cells or adult stem cells that are present anywhere in the body must be stimulated to start working. This irritability in nature is a natural way, such as bodily injury, bleeding, etc., in which mature stem cells recognize that they need to be activated and replaced with damaged cells. Sometimes stem cells go in the opposite direction and unfortunately transform. They turn into cancer cells. At this time, an enzyme turns stem cells into cancer cells. The enzyme that converts adult stem cells to cancer

cells is a well-known enzyme called ABAR1, which is easily detected in cancer patients. The question is why mature stem cells are not so much more complete and incapable of regenerating. For example, the reconstruction of an amputated finger or eye or foot or heart muscle or brain neurons. The next question is that embryonic stem cells are very active and alive in the baby's body for up to two months and cannot completely regenerate an organ like some animals (lizards, etc.). We are now investigating the cause of this issue. It is caused by a special enzyme called PTP1B, which blocks the activity of stem cells in the body and stops them from working. An inhibitor called MSI-1436 can be used to deactivate this enzyme, which can reactivate mature stem cells in the body like embryonic stem cells to the point where they can even rebuild the heart muscle and cells. Recover others who have been injured in the body. MSI-1436 inhibits the PTP1B protein enzyme in two ways to re-enable mature stem cells in various tissues in the body to function again as embryonic stem cells. Method 1: Direct effect of MSI-1436 on PTP1B enzyme; in this method, it must be present and attach to the PTP1B enzyme to impair the function of PTP1B. Method 2: Stimulation of MSI-1436 on PTP1B enzyme; in this method, MSI-1436 deactivates PTP1B by colliding and the presence of MSI-1436 in the next steps is not necessary. Following this action, MSI-1436 disables the PTP1B enzyme, which deactivates stem cells in the body, and the adult stem cells in the body are transformed back into stem cells with the function of embryonic stem cells, except that these cells They have the ability to transform into the cells that are in them and do not turn into every cell. For example, if they are inside muscle cells, they only turn into muscle cells, and these are the wrong paths for mature stem cells that are spontaneous due to stress. Nervous proliferate. If genotoxicity occurs, the pressure on the stem cells increases and they begin to multiply and convert their DNA into damaged DNA, resulting in the production and proliferation of cancer cells. Substances that cause genotoxicity and stress on cells: the sun's ultraviolet rays and chemicals such as detergents and shampoos, etc. that are fertilized through the skin or through food such as chemical drugs and fruits and vegetables that are fertilized by chemicals. Of course, the opposite is also true, that is, changing the DNA of stem cells to better DNA. What is very certain is the type of nutrition and the type of climate... These are the factors that affect our DNA and cause defective DNAs such as cancer DNAs. So things like nutrition and living environment, the type of climate are very important. According to research by the non-profit MATH TLEART institute, in the last 20 years the kind of thinking and stresses of life that we have every day and gratitude

and satisfaction and love, anger and tiredness are very, very effective on the DNA of the cells produced. "The difference between the original and the natural genetic state of a person is very important," says Professor Bruce Lipton. All of a person's physical, behavioral, and emotional states are controlled by their genetic codes. When we feel negative, such as anger and fatigue, hatred and having or not having two sets, or negative thoughts or expressions such as: "I hate my job" * When a person gets angry According to research, the type of energy we go back to ourselves. (HMI Website) These energies are used to turn stem cells into damaged cells in the body. As a result, our obtained cells have better DNA, and with better cells, we experience less stress and a better life.

In the study, 3 cases of DNA positive method were applied and positive mental, emotional and physical results were produced in two cases and had no effect on the third type. This study proved that DNA changes are influenced by behavior and thoughts. Proof that when people act kind-heartedly and with love and friendship, they have a higher ability to conform DNA. The theory of Duck Chillers (smart heart) has shown that a kind of information binding energy is generated between DNA inside cells, which increases the ability to predict people very accurately and accurately. Any good heart feeling increases this intracellular DNA information link. These people have the ability to make positive changes in their DNA (if we want to compare this method with the method mentioned in the section on Negative Thoughts and Stress, as explained, write some of that brain here. So positive or negative change The DNA of the newly produced cells is in our own hands.

As a result we should say as explained in the above article, there are stem cells in the human body that are activated when necessary and act to supply damaged cells to the body. Scientists are using MSI-1436 to inactivate the ABAR1 enzyme to reactivate these embryonic stem cells, and various methods have been able to stimulate the stem cells. To the extent that a whole organ, such as the heart muscle, etc. grows. In order to convert stem cells into other cells, the stem cell transforms itself from the replication of DNA inside its cell to a damaged cell that Cling to it and we also saw that if the stem cell is affected by * genotoxic pressure, it will automatically start to multiply and negatively change its DNA and make cancer cells, and finally we saw Based on research by the institute over the past two years, not only the type of nutrition and climate, but also the way others think and love. One is able to predict the future situation. But what is the result of all this? First, stem cells

in the body that must be stimulated to proliferate and alter DNA, according to modern science, in a completely abnormal way. What to do in traditional medicine: We very easily in traditional medicine transmit signals to stem cells for activation, and it is nothing but dry cupping (hot air balloons) that causes stem cells to enteric and sound to them. Tells the cells what a strange thing happened inside the body and the DNA of the damaged cells must begin to multiply immediately. The result of this research is nothing but what we have been doing for thousands of years. But making new cells that are stem cells that have good DNA and are not problematic but even better. And what is it? Nutrition Proper nutrition of good materials and good weather and good thoughts and hearing and seeing positive things, saying positive things kind-hearted and forgiving others and praying for enemies and wishing happiness for humanity. Which makes the process of converting them to better DNA easier and better. But what if the PTP1B protein enzyme is not made to inhibit the function of stem cells? According to the order of the Prophet of Islam, cupping at effective times prevents the body's stem cells from aging and continues to function like war maneuvers. Decreased neurons in this part of the brain can cause short-term memory problems and also make it difficult to recall new memories, which is why when you are angry when you are angry, what You want to say it does not cross your mind and a few hours later a more appropriate answer will come to your mind for that moment. Elevated levels of the hormone cortisol decrease the amount of serotonin, which is the hormone of happiness, and a decrease in this hormone can cause you to get angry sooner and engage in aggressive behaviors. In the following, we will refer to other problems that anger causes for other organs of the body: - Increased heart rate - Increased venous stress - Increased glucose and fatty acids in the blood - Decreased thyroid function - High blood pressure - Weak Cells become resistant to viruses - Increased risk of cancer - Decreased vision - Increased pressure in the eyes - Decreased cell density in the bones - Decreased metabolism - Migraines and headaches - Dry mouth. It should be noted that regular exercise is one of the most important factors that can help balance hormones in the body and ward off anger in people. In the following, we have collected hadiths from the elders, a small part of which we will explain below.

The Holy Prophet (PBUH): The strong are better and more beloved in the sight of God than the weak believer.

Imam Ali (AS): Whoever does physical work becomes stronger and whoever fails to work, will become weaker.

And we have a review on the role of happiness in body and soul health: Studies in recent years show that the role of happiness in heart and brain health and immune system is more than imagined. Happiness promotes heart health: Studies show that happy people have a more regular heartbeat and lower blood pressure fluctuations in these people. Studies conducted by Canadian researchers in the year 2010 show positive emotions such as happiness, excitement and excitement are more likely to develop diseases. Reduces the coronary arteries of the heart by 22% Happiness strengthens the immune system: Studies show that stress leads to biological and hormonal changes and one of the most important causes of high blood pressure is stress. Happiness reduces pain: Studies in the year 2001 show that happiness reduces pain and muscle pressure, dizziness and heartburn. On the other hand, these studies show that the amount of pain in patients with chronic inflammation, including arthritis, is associated with feelings of happiness, and patients, especially happy women, are less likely to suffer from inflammatory diseases. Happiness reduces physical disabilities: Studies show that optimism and happiness reduce the risk of many diseases, including breast cancer, a result that has been proven in many other diseases. Happiness contributes to brain health: Happiness and positive thinking affect brain health through the following methods. Happiness is a stimulus for the growth of brain communication. Happiness improves cognition and increases the productivity of the brain. Happiness increases the brain's ability to analyze. Happiness improves concentration and memory. Happiness causes longevity. Feeling happy and satisfied is the best way to deal with illnesses such as depression. Also, happy people are more inclined to exercise. There are ways to improve your mood and happiness, which include: do not eat a heavy meal. Exercise. Get enough sleep. Inhale fresh air. Laugh a lot. Participate in volunteer work. Professor Morteza Motahari writes in the definition of happiness: "Server is a pleasant and enjoyable state that gives a person the knowledge that one of the goals and desires will be fulfilled or will be fulfilled." Living happily is one of the necessities of human life and self-improvement and reform of society are its consequences. Happiness has a good effect on both the soul and man. The following are examples of happiness: Appreciating the effort and goodness of others. Enjoy the divine gifts. Act positively. Positive thinking. Being open. Living in the present. Self-righteousness and appearance and satisfaction with life are other examples of happiness that can be experienced in life. The great emphasis of Islam is on making the most of human beings happy moments, in order to increase their spiritual and psychological readiness to achieve growth and

perfection. If a person removes sorrow and grief from the servants of God with an open face and good intentions, he has performed the worship of God and he himself will be pleased with this joy. Imam Baqir (AS) is quoted; In the sight of God, worship is no more beloved than to make believers happy. If you want to establish Khalil Kaaba, release two thousand servants a day and make it a place of prayer and obedience, there was no need to rejoice. Happiness Research Recent research by researchers at UCLA University in North Marvelina shows that genes and cells are highly responsive to happiness and generosity. Psychologists have been emphasizing the positive effect of happiness on the human psyche for many years, and there have been many lectures on this subject around the world. These studies have shown that the immune system of happy and benevolent people who are looking for an opportunity to help their peers is much stronger than selfish people who have constant negative emotions. In these studies, the effects of emotions such as happiness, stress, jealousy and fear on people's cells and genes have been studied in detail for 10 years. According to the director of this research project, the direct effect of happiness and good feelings on the health of body and soul has been clearly proven and proven. The research goes on to say that actions to satisfy the human role have a very negative effect on cells. Hence, immune cells react more to fear and depression, become inflamed, and their anti-viral activity decreases. On the other hand, blood and genetic tests show that the genetic activities of happy and benevolent people are more desirable than those of sad, anxious and selfish people. A team of 190 researchers from 140 research centers in 17 different countries studied the genome data of hundreds of thousands of people to identify the genetic diversity associated with feelings of satisfaction, depression and neurosis. The researchers found that these genes are often present in the central nervous system and in adrenal or pancreatic tissues. To conduct this research, the researchers collected data from a large number of previous studies and, using advanced analysis tools, analyzed this information into a unit consisting of the genetic information of 298,000 volunteers. Previous research has shown that the difference between the level of happiness and well-being of individuals is related to the genetic structure of their bodies. This issue has been considered more and more by proving the direct effect of welfare on the mental and physical health of individuals. But researchers believe that genetic makeup is the only factor that affects how people feel and think about their lives. Also, the environment and how it interacts with genes are also of great importance. The study of genes can provide a correct understanding of the reasons for the biological talent of

individuals in intensifying these feelings and can be a way to identify the factors that affect the level of happiness among different people. Now we want to show which DNA of human, corona virus likes more in the picture shown below you can see the R1B, DNA expansion, and the expansion of virus in February 2020.

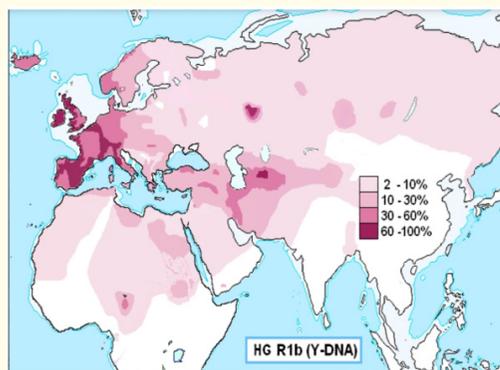

Figure 1

Figure 2

It is very clear that this virus likes the gen R1B.

Question so why this virus in other places also affect human? Answer is because age, other diseases such as diabetes, blood pressure and etc. can affect the human's body to become weak enough such that cannot defend. Also the main important reason which is very important is the amount of H₂O₂ inside the water, foods and etc. whom people of that region takes. Such as people in IRAN the amount of H₂O₂ in their body is hundred times more than other people in other parts of the world. To destroy the H₂O₂ inside the body the best thing is Olive Leaf.

Prediction by appearance of people

- Do you have big head? Do you have long forehead? Do you have big nose? Do you have big mouth?
- Do you have thick hair? Do you have big chin? Do you have a lot of beard (if not shaved)?
- Do you have big eyes? Do you feel hot most of the times? Do you have black eyes?
- Do you have big and strong muscles? For “YES” answers add, one and for “NO” answers subtract one.
- Calculate the summation. Suppose the summation is “x”.
- Your AH is equal to $\%(x*9)$.

Analyzing and Finding sick people

Do you have any stress? (Yes= -2, No=0)

Do you like sweet taste more than sour taste? (Yes= -2, NO= 0)

Are you feeling worse in the cold weather? (YES= -1, NO= 0)

Are you feeling worse in nights? (YES= -1, NO= 0)

Is your age more than 35? (YES= -1, NO= 0)

Are you a lady? (YES= -1, NO= 0)

(For female) do you have any problem with your periodic? / (for male) are you feeling exhausted?

(YES= -1, NO= 0)

Your AH of appearance is more than 25 %?(YES= 1, NO= 0)

Your AH of appearance is less than -25 %?(YES= -1, NO= 0)

Calculate the summation. Suppose it is equal to Y then it means the DH = $\%(Y*11)$

Now we find the value of disease. So we should use nutrition that makes the summation of Disease H= DH and nutrition H=NH, it means DH+NH=0, but we need to know the NH of the plants,...

Here we measured some of the NHs we share these with you.

Fruit and gosht plantain H=100 W=100, Opium black poppy H=100 W=100

Diamond Stone or Mineral H=100 W=100, Shokaran or Si-kran H=100 W=80

So here the person who is sick suppose has DH=60%, to cure him we need the nutrition with NH=60%, such that DH+NH becomes zero.

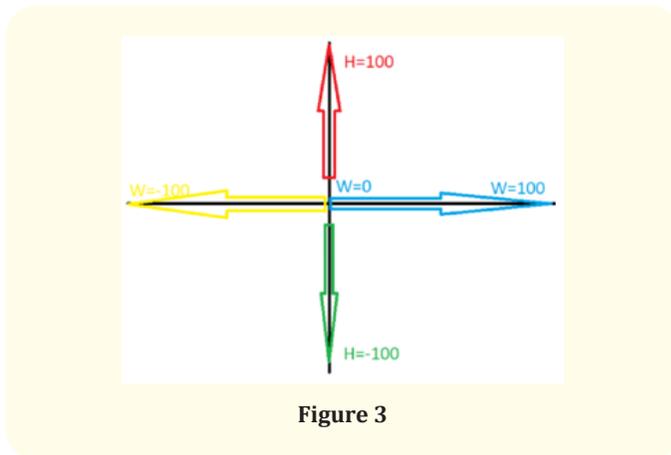

Figure 3

Such as Olive tree leaves NH=60, Fresh fence NH=60, Fijn Fresh NH=60, Round Zarand NH=60, Aryan fruit NH=60

Any of these are useful to cure him. But more explanation required due to location of diseases.

Conclusion

In this research, the main aim is to develop a new method to predict NTVs to be created and try to stop blood clot not by decreasing immune system and to develop a new method to overcome new virus attack very cheap available everywhere and more healthy, just by nutrition. To prevent viruses enter the lung at the beginning we use the cigarettes of Olive Leaf then later on if the viruses enter the body due to body defenses against the viruses by antibodies and the blood clot take place we use leech therapy to increase the body immune system and decrease the blood clot at the same time we use Olive Leaf tea to increase body immune system more than before, decrease the blood clot, prevent the fusion of viruses in the cells and do not let the viruses transfer among the cells. Also In this research, the main aim is to develop a new and easy method to relive stem cells to make healthy and useful long life for human.
