Bangladesh is a deltaic riverine land derived during the emergence of Himalaya mountains formed with alluvial soil as well as the world's longest unbroken sea-beach of Cox's Bazar and world heritage the largest mangrove forest the Sundarbans, a sea-sided vast plain land except the hill tracks of Chittagong and some part of Sylhet. From time ancient, its inhabitants are nourished and reared up with the blessings of nature through agricultural abundance.

Agriculture, here, the sole profession of the major and almost direct and indirect adoption of the whole Population, As it were, men and merchandizes here are made of agriculture.

Once upon a time, from time immemorial, men groups or societies were not connected like now-a-days Where "Survival of fittest"- for human existence.

But, at present, here's a diametrically opposite trend a race among the human races for classes and dominance. A matter of amusement is that, this implicit illness has become very keen in the name of government or non-government services and surveillance.

For an example, I will say just a one of my Papers for this very seminar. Though it is severe, it has become a body-endured accustomed matter is that pre-flood water enter in the north-eastern areas of Bangladesh.

Surrounded with Haors (wet land's) and crops loss, specially paddy as a whole.

As a result, a well-to-do farmer becomes a pauper, almost a beggar.

Appetite bites - So nothing to hide to survive.

The money monger - Mohajons (Cyclic) Users trick and play "hide and seek" conditions of interest are unwritten and orally black "a noose of bruise" like Ham lock of Socrates.

The then time, livelihood meant only the principal food, rice - "Vaat" in Bengali word. Can you imagine or depict a picture, plight of disabled there? Where mitigation of hunger becomes acuter, social and family ties become bitter.

Food is a Physical factor; but "negligence" is a mental fortune, explicit and implicit fortune so that a disabled may early expire.

And, it is, indeed, the real prevailing scenario almost in all the agro-based areas of Bangladesh with a fear of "Poverty drawing neigh" - parents/guardians or custodians sign - they only try for a sound guy who will bring pies and will eat chicken fry - even a little fry such way ply.

Phenomena of education, medication and rehabilitation are totally abandoned for a disabled person in the agro-based region - "a death cordon" throttles on an on.....

As if a foregone conclusion.

Reality: In various occasion, the elites of politics and societies fly peagon of peach which seems as a poisonous abyss to the persons with disabilities.

Now is the era of green economics for humans existence and longibility with most modern facilities without disrupting the natural integrity as a whole in this single globe.

"Let a turtle dove be kept in love".

Our's a tropical country a territory of 1.47570 square km approximately. Where god has powered and bestowed depicted. Natural tranquility lies here in plenty. It is depicted in the history that almost the whole Bengal was a granary. The total land and homestead were blessed with natural prosperity possessing agricultural entity and identity another professionals were also farmers in a family inherently with the advent of non-agricultural friendly industries immense race-now we see, climate Change-a death-mate, for flora and fauna along with the mankind's existence.

Not more than 30 years, villagers had frequent facilities for having their meal. There were greens and vegetables from there derelict surroundings and premises home stead, varieties fishes water grounds, poultry and cattle husbandry and frequent seasonal fruits from inside or adjacent gardens. More often than not, a fisherman or farmer could entertain his family with naturally trapped birds.

According to renowned and Portuguese and Chinese tourists Ibne Botuta and Hue Yen Sang addressed this Bengal at present, our Bangladesh as "Heaven" where peace, happiness and prosperity were mundane.

This is to say that attributive statement may be endless. But, at present there, in lieu of those golden days what geo-socio and geo-political impacts prevails and trends ahead.

"Prevention is better than cure" Worlds leaders aren't unanimous in the issue of Climate Change. Our country Bangladesh is in the most vulnerable condition next to Maldives. We, the disabled section will fall into severe awesome condition. Our plight will be jeopardized.

So, no alternative of being organized worldwide. Not being victim of aggravated future, we want to be nurtured by agriculture, diversified most modern agriculture.

Now-a-days, there are mud less water based phenomena. Medication, sanitation and beautification are covered by agriculture, Shrubs and herbs serve much. As the president of NFOWD (National Forum of Organization Working with the Disabled). I am endeavoring to set up every disabled in any sector like NGOs, government, Semi-government, institutions, forums, associations, organizations, clubs, foundations where there's a least touch of agriculture along with other professionals at large.

Bangladesh is no longer in previous situation, It has lifted to a developing country from LDC (Least developed Country). Availability of electricity is a reality now. So almost all the rural markets have become electrified and mobile phone network coverage also. Disabled persons can easily collect daily market's toll on behalf of the management body. Here he/she can ensure other disabled persons products sell. In the markets there are rows of sellers with their produced products, the sound ones try to a hinder backward quarters in which disabled are ignored much. Due to mobile communication they have a rescue on over the situation.

Very recently, Bangladesh launched a satellite named Bangobandhu-1 of her own. A door of vast prospects is opened. In near future, probably with in this very year 2018, the next one, named Bangobandhu-2 is expected to be launched in the orbit which will expand and strengthen our national telecast system and other scientific advancement. To fill up our national goal "Vision-2041" of being a developed country by 2041 our country is going to be turned into a "Land of Prospects a land of works" south Asian Heart of Economics.

The whole country will be a large workshop. "Green Economics" theory is being introduced to establish green peace on our globe. Through a decade our honorable Prime Minister, the eldest God-blest fortunated alive daughter of the father of the nation, Bangobandhu Sheikh Mujibur Rahman's Sheikh Hasina has been included amongst the most powerful leaders on the earth. She has framed out global peace process through her writings to prevail peace and to resist the terrorists with such a message that absence of merit and peace produces impaired political pupils. She has been awarded the most prestigious prize "Champions of the Earth".

On Rohingya issue (Ethnic clinging by Myanmar military govt.) our prime minister has been give the title the "Mother of Humanity".

More than 1 million people are sheltered in Cox's Bazaar. Along with others complexity this problem has been damaging our forestry and agriculture as usual. We the impaired persons feel the victims best, as we possess always the experience of negligence even lying on mother's breast, we are always enmeshed with problems.

We, the impaired people, with our own effort to motivate those victimized, traumatized ousted, not to cut, but to plant trees, saw seeds, cultivate vegetables and greens.

There are depressions in the deep sea. Cyclone, Tornado, Severe storm, heavy downpour devour men, devour oxen, devour den, devour crops more in the areas alongside sea-shore. If the impaired have satellite given forecast, they can urge the concerned to take cautionary programs man and merchandise, agro-based products can be protected from being wept and thrashed.

So, in Met office, Meteorology Department, we the impaired want permanent appointment. Inadequate coverage of messages causes tremendous damage in natural misshapes.

And, in Disaster management and Rehabilitation Department to assess probable total damage to be properly compensated and rehabilitated. As because there are bureaucratic red tapes pinches "The wearer best knows where the shoe pinches".

Our present government with the leadership our prime minister has taken, a century-longed plan named as "Delta plan, Bangladesh-2100" which is the largest and longest plan in the history of the country, that will be implemented step by step for a total period of hundred years. Naming of anything reflects its origin.

Delta Bangladesh it is the largest such area on the earth. Delta always is related to water body. For being a plain riverine country with marshes, takes, canals as a whole almost the total area turns into a water ground during flood boom. So the plan is formatted on its deltaic hydrological form.

Basing on geological structure, first and foremost preference has been given on agriculture so that the total development plan (Delta) may become ecological.

That is, this century long plan's key challenge is to maintain ecological balance which will derive vast scopes of eco-friendly jobs countrywide.

So, our strides aim to exercise our constitutional right.

Eco cover's the whole agro derives agro-vet agro-tech etc. Which lead to eco era.

For in discriminated rapid scientific appliance, there are some lapses creating probable future problems, theory of all "agro" must follow the below

- Grow auspicious embroiled
- Narrow hazardous into zero
- That is with our prime minister eco agro is our view and motto.

As natural calamities are constant parallel companions of any kind husbandry in our country. By hook or by crook, we have to protect the broth.

By any attempt, we have to pluck our harvest. A visual impaired can concentrate, by reciting hymn can control hail storm and save crops from being bulldozed to the ground, even river erosion. By being soothe sawyer, an impaired person can predict draught and floods.

According to Robert Herrick that prayer brings such things which aren't got by other means.

Gos pel does aware, our first father despite being the first messenger, was a farmer.

John Abraham Linkon was a foresighted of agriculture.

We the human beings are made of two things mud and water. Sunlight and air keep us alive and nurture alike agriculture stands on mud and water and in the same way sunlight and air are its grower.

Without agriculture mankind lasts no longer. We, the impaired are qualified modern farmers, like our forefathers, bequeath agriculture through positive scientific methods and structure.
