Entire globe is belligerent with an environmental issue, like climate change, global warming, pollution which cause hazards to the ecology, environment, humans and wildlife. It is our responsibility to protect our ecology, our earth, our nation for future generations. Therefore, there is a strong need to encourage sustainability in our day-to-day life. Our each and every action has an impact on environment. Starting from your food eating habits to the car you drive. Time has come to retrospect our system and work out the solution to bring-in sustainability in our lifestyle.

In 2015 United Nations General Assembly took an initiative to promote sustainability in the universe by setting up The Sustainable Development Goals (SDG's) which is also called the Global Goals so that the entire globe should be aware about the need and importance to bring sustainability in the system. There are 17 interweaved global goals designed to achieve more sustainable and a better future for all. The SDGs were intended to be achieved by the year 2030. However, it is only possible with inclusive efforts by all stakeholders.

Circular Economy approach can be a game changer to bring sustainability in the society. Means waste of one industry can become the resource of another industry. Reuse and recycling of product are the waste reduction and resource conservation strategies by the Circular economy philosophy. There are many industries wherein this concept can be applicable. Such as Agriculture, Manufacturing, Construction, Energy, Agribusiness. SDGs can be achieved through circular economy approach.
