Introduction

With the alarming spread of climate change and its global effects on all countries, the issue of food security and the danger of the increasing gap between needs for food and the rate of its production. Food is the one important factor in Agriculture.

There is a vital need is the transfer of knowledge and appropriate Technologies from where it exist and found (Universities and Research Centers) to where it is vitally needed (small Farms, Rural, and Desert Communities) to meet the increasing demands to food for the increasing demands to food for the increasing population and better and sustainable living communities.

Managing creativity and encouraging the generation of new ideas and finding appropriate solutions to existing (or potential) problems comes on the list of works for the association, the university and society.

The transfer of appropriate knowledge and technologies is the key to the sustainable development of society

We need distinguished, creative, complete and integrated performance to achieve the sustainable development of society.

Singapore experience - Al-Masry Al-Youm newspaper, August 2, 2023, Egyptian Youth Council + exchange of experiences environmental education/public awareness/Service Learning/Community- Based E, A, and T Volunteering- Need/Change/Progress.

Balance Between Consumption of Production Conservations and Innovations with a Proper Community Awardees.

We Believe that by bringing Together individuals from different backgrounds and prospectors, we can create creative new ideas, approaches and solutions that will have a positive impact on society.

Figure a

Univs have an important opportunity to refocus entrepreneurship education as a global mindset of skillset that can be taught.

Univs-inherently vested with a mission to advance education, research and services to society – are arguably best equipped to connect all Key stakeholders.

Global Partnerships, Univ, can be at the forefront.

How soon all the parties involved will learn to collaborate successfully enough to get us there and to drive economic growth and well-being.

The Univ Partnership with industry and government represent the future for better living communities.

Human and environment
