In the essay to be published, about: "How is it that just with Quantum Physics year 2022, Quantum Physics that is in fact part of the QHG Quantum Holistic Geology, (quantum physicists, quantum chemists and quantum mechanics, lose the HOLISTIC VISION) the QHGA Advanced Holistic Quantum Geology, studies since 1778 "How is it that the behavior of atoms influences the behavior of human beings". (International Lambert Editorial and IIMP magazine: "In the Mining Ecosystem, the mini modular reactor will process the ore within the same mine, its recovery will increase by 75% with Quantum-Holistic Geology and the conflicts will go to investment projects, year 2021".

It is highlighted that, both human beings and atoms, move in most cases in groups, some atoms walk alone as some human beings also, go alone. "The exception justifies the rule".

Cases such as: The replacement of a general manager, with many years in the company and has a super specialty, changing him, for another human being, generates a change in his business environment, it is not the replacement of a robot by another robot of the same factory series.

The effect can be brutal, very critical, devastating, the same thing happens, it's the same, in atoms, for example, when the Aluminum Atom Al enters, where the Silicon Atom Si was, in certain structures that we call ECEs Crystal States Structural no longer minerals (the mineral name is obsolete, scientifically it says nothing) the atomic structure expands, a distortion occurs, the angles between chains of atoms change, it can even produce an explosion, different types of energy are released many times and its existence at the same time, in different parts, of a certain atom and the effect,

the result is that we will have loose, soft, very labile materials and others that are very, very hard.

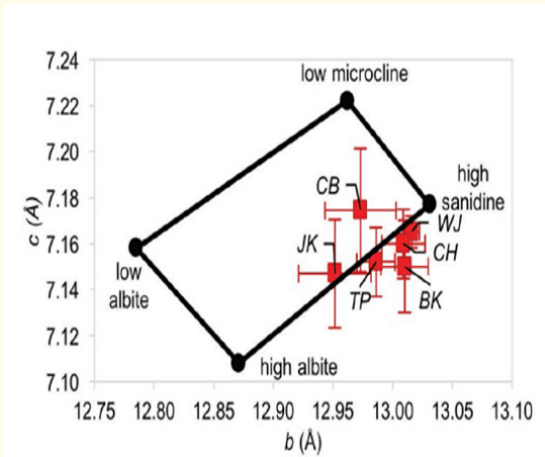

Whoever dares to want to break the union between an adult mother and her daughter who has been left in charge of the mother, many human groups have disappeared due to internal and external factors of the group and also due to environmental factors.

Where are the patrons, who helped Ludwig van Beethoven, what would we do without his fifth symphony and the ninth, when he was already completely deaf.

It seems that Nature, seeing it via the tools of Statistics, the Gaussian campaign, the Pareto queues and the STM Systems of the Three Matrices, that it is necessary to cover all the spaces, the parts of that bell, and put different types human beings and also ECE Structural Crystal States and CCC Communist Chapter Community Corporations, to cover all options and leave nothing free and to chance.

The atoms of Lithium, Tin, Niobium (Columbite) and Tantalite, together with other less important chemical elements, go together in nature, it is a lobby of atoms, like the lobbies of human beings, they do not allow other atoms to enter, We postulate to the new first virtual Country called "Universe", zero limits between countries, zero unemployment, zero enemies. "Money we have what we lack is true friends and time to spend it" by the way, the concept of friend has changed, now it is the one we can take advantage of, ask for money and love us with his wife.

Next, we have a comparative example between the results of NASA with the samples brought from Planet Mars in 2018 and my doctoral thesis in 1978

**Figure 1:** Diagram with the signs of the planet Mars. Use crystallographic axes b and c. deduced from those of X-Rays. They do not do Crystallogenesis, therefore they do not interpret what metallotects (mines) exist on the planet Mars and what the mining products are (source: NASA, there are six samples brought from the planet Mars in 2018, analyzed with my Crys-Explo method, output from my doctoral thesis, year 1978).

In the satellite map you have the mines, results of the application of the Crys-Explo.

In the 2018 paper, NASA does not complete the Cys-Explo application, and does not report what mines exist on the planet Mars.
