Abstract

This author's research article presents the results and comments on the reflection in phaleristics, on thematic badges and brooches, in plot drawings, of the human chest, its individual parts and vertebrae. As illustrations for the text of the article, the author uses screenshots of thematic icons and brooches, used illustrations taken from various sites on the Internet, accompanied by additional comments. In total, this research article presents 88 phaleristic illustrations. All thematic badges and brooches are presented in their own subsections, with an arbitrary number of them.

Keywords: Human Anatomy; Human Chest; Phaleristics; Thematic Badges and Brooches; Screenshots

Introduction

The study of human anatomy, as one of the most important branches of medical science, is always an important and topical issue of ongoing research. Such research, using the powers and means of collecting in such research, makes it especially interesting and exclusive. In this scientific article, which is the next in a series of original scientific articles, in particular on anatomy, where the author uses, as illustrations, the means of phaleristics. This innovative, exclusive approach, skillfully used by the author, has already brought success over 8 years to more than 150 articles by the author on medicine and its various branches.

Aim of Study

The purpose of this article is to reflect the presentation of phaleristic materials in the form of thematic badges and brooches dedicated to the anatomy of the human chest.

Material and Methods

When writing this article, its author uses methods such as literary critical analysis of all available, at the time of writing, domestic and foreign sources of information. After careful selection and

systematization of selected illustrative material, they were divided into subsections of different organs and systems of the human body. All found illustrative materials were converted by the author into screenshots, and used in this article, into thematic illustrations, with strict observance of copyright, and mandatory indication of the sources of their borrowing on the Internet.

Results and Discussion

I would like to begin the presentation of the found phaleristic materials with the presentation of such a part of the human musculoskeletal system, and part of the human skeleton - its chest, which are presented in figure 1, a total of 81 copies of thematic icons [1-8].

Figure 2 shows a small, collectible selection of thematic brooches, in the amount of 17 copies, depicting a human chest. All of them are made of different materials, metal and plastic, at a high artistic level [1-8].

This concludes another author's research article devoted to reflection in collection materials, in particular in phaleristics, anatomy of bones, and the human chest. The author is preparing a new

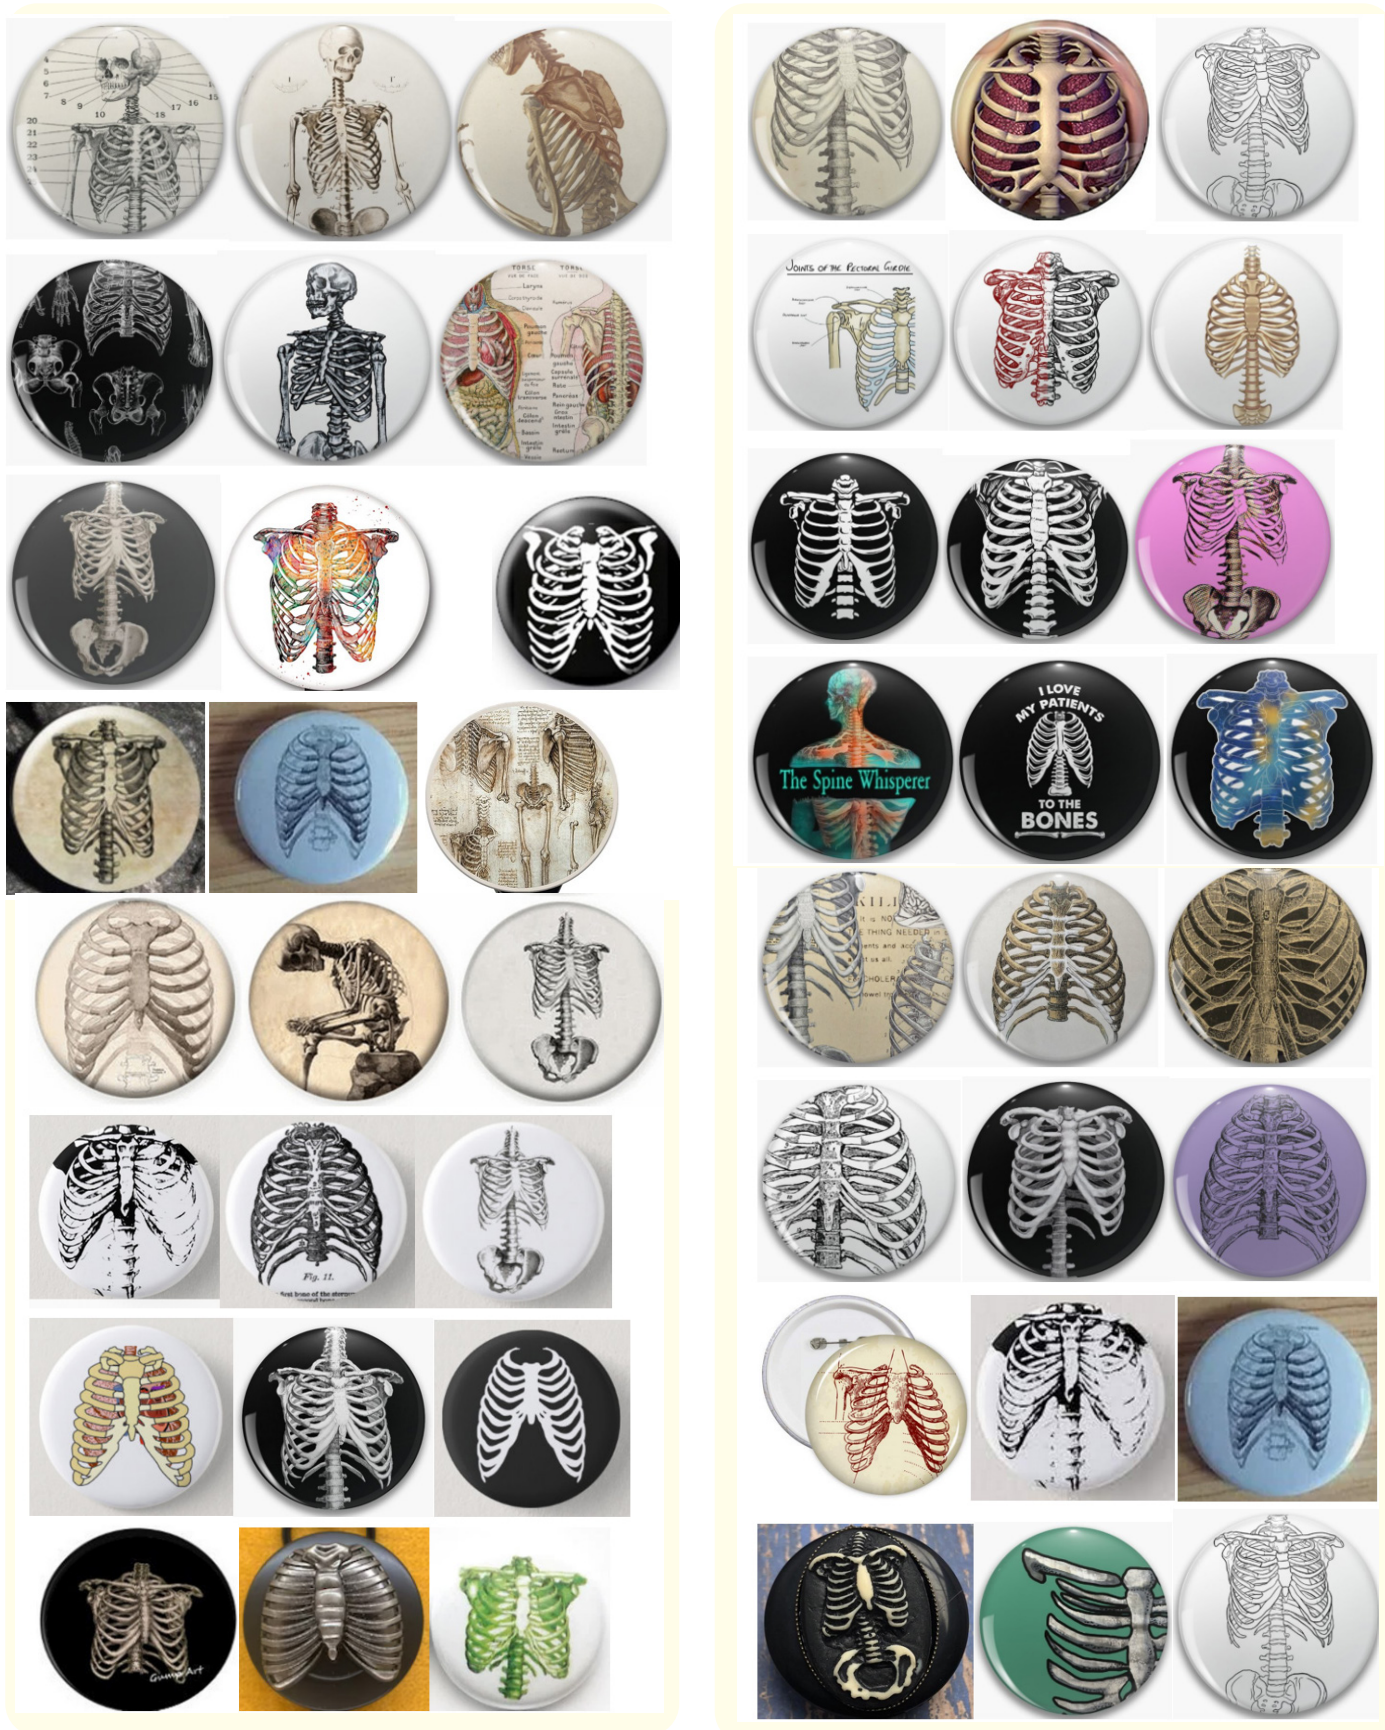

Figure 1: Thematic selection of icons depicting the human chest.

Figure 2: Thematic brooches depicting a human chest.

thematic article, which will be devoted to the anatomical features of the human pelvic bones.

Conclusions

- The author of this research article fully succeeded in achieving the goal stated by them.
- The illustrative materials presented in this research article, in the form of screenshots, complement the article in a bright and creative way.
- Reflection, in the means of collecting, research materials on various sections of medicine and, in particular, human anatomy, enriches our knowledge and ideas about medicine, its history and heroes.
- The author of this research article completely succeeded in achieving his stated goal.
- The illustrative materials presented in this research article, in the form of screenshots, brightly and creatively complement the article.
- Collecting and, in particular, phaleristics, in the form of collecting thematic icons, as research materials on various sections of medicine and, in particular, human anatomy, enriches our knowledge and ideas about medicine, its history and heroes.
- This concludes another author's research article, the purpose of which was to reflect the representation of the anatomy of the human spinal column, and its individual vertebrae, in such a section of collecting as phaleristics.
