### Abstract

This author's research article presents materials from a study devoted to the research issue and the study of the representation of the human respiratory system, as reflected in such a collecting tool as phaleristics, on thematic badges. In total, the article presents 80 thematic, anatomical badges dedicated to the respiratory system.

**Keywords:** Human Anatomy; Respiratory System; Lungs; Bronchi; Bronchial Tree; Phaleristics; Thematic Badges; Screenshots

### Introduction

The study of the anatomy of the human body, its individual organs and systems is always a relevant and sought-after issue, especially if the illustrations in considering this issue are such a collecting tool as phaleristics, with thematic badges depicted on the front, as in this case, are the components of the respiratory system - the lungs and the bronchial tree, with alveoli.

### Aim of Study

The purpose of writing this author's research article, thematically dedicated to the issue of studying, the representation of such an important section of anatomy as the human respiratory system, in such a collecting tool as phaleristics, on thematic icons dedicated to this topic.

### Material and Methods

When writing this article, its author used the method of literary critical analysis of the issue he was investigating. For this purpose, the means of the world Internet, websites, and Internet pages of communities of collectors working with collectibles, in medicine - philately, numismatics, phaleristics, were actively used. It should be noted that when preparing this article, its author did not find a single article on a similar topic on the Internet, either professional, medical, or on the Internet pages of collectors writing in the direction of medical topics and, in particular, in the field of respiratory system! All found phaleristic materials devoted to anesthesiology and resuscitation were converted by the author of the article into

screenshots, with a mandatory, strict indication of the sources of their borrowing, in order to respect the copyrights of their owners!

### Results and Discussion

To begin my story about the representation of the organs of the human respiratory system in the reflection of thematic icons, I would like to start with a small selection of thematic badges, in the amount of 32 copies, with an image on their front side/obverse of a general image of the organs of the respiratory system - lungs, trachea (with and without the epiglottis), with the heart and bronchi, both in whole, volumetric form, and in section [1-5].

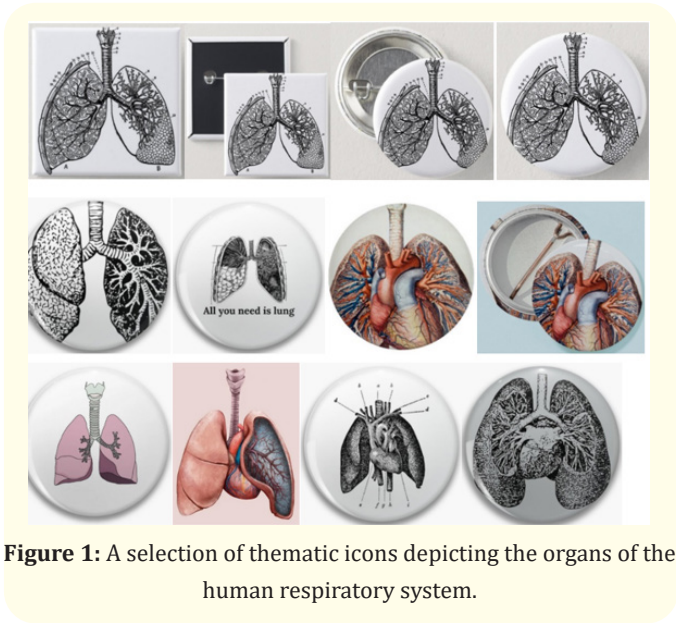

Figure 1: A selection of thematic icons depicting the organs of the human respiratory system.

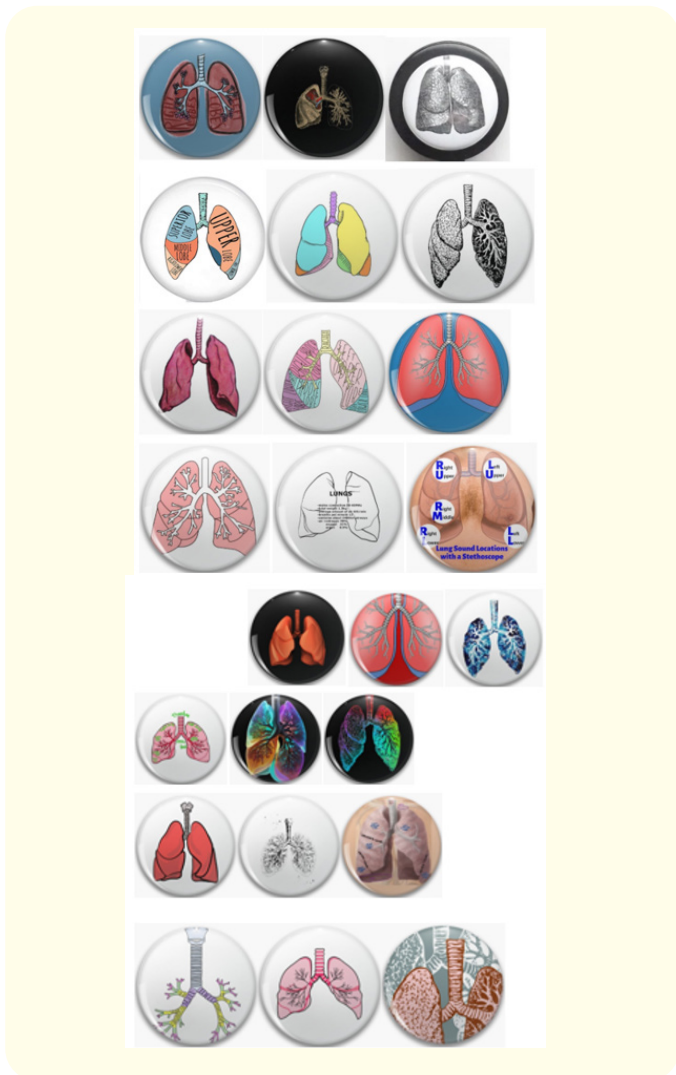

Figure 2: A selection of thematic anatomical badges, depicting the lungs and bronchial tree.

Figure 2 shows a selection of thematic badges, in the amount of 48 copies, depicting the lungs, with possible options, one or two lungs, along with an image of the bronchial tree, sometimes, along with bronchioles and alveoli, and an indication of the lobes of the lung, both right and left [1-5].

This concludes another author's research article devoted to the anatomy of the human respiratory system, reflected in thematic badges.

### Conclusions

- The author of this anatomical research article, in a fairly complete volume, presents the anatomy of the human respiratory system, reflecting this type of collecting as phaleristics, on thematic, anatomical badges.
- The purpose of the study, stated by the author of this article, was fully implemented and achieved.
- The use, as illustrations, of screenshots of thematic anatomical badges, both in color and black and white, is quite appropriate, and significantly complemented and embellished this article.

The author notes the complete absence of any conflicts, both with individuals and legal entities.
