Abstract

This author's article presents the results of the study and their analysis, devoted to the study of the issue of representation of the found phaleristic materials, the issue of reflecting the human reproductive system (both men and women) on thematic, anatomical badges and brooches. In total, this article presents 113 copies, copies-screenshots, of which 103 thematic badges, and 10 copies of copies-screenshots-brooches.

Keywords: Anatomy; Human Heart; Cardiovascular System; Phaleristics; Thematic Badges; Brooches; Screenshots

Introduction

The study of issues related to various areas of human anatomy, with many aspects devoted to the structure and functioning of its various organs and systems, is always very important, relevant and in demand. The author has already prepared and presented more than 20 research papers devoted to the anatomy and physiology of various organs and systems of the human body. At the same time, the author's article on the reproductive system of the human body is published for the first time. At the same time, this very important human system will be presented in the reflection of such a means of collecting as phaleristics - in the form of thematic, anatomical collections of icons and, in part, brooches with images on them. Organs and parts of the human reproductive system, both men and women. All illustrative materials found for this research article were systematized, and presented to the reader, in the form of screenshots, numerous copies of illustrations, with representation (on their front part/obverse), both black and white and color copies, reproductive and sexual systems of men and women.

Aim of Study

The purpose of the research carried out by the author, and the writing of an article based on its results and their analysis, is to present the results obtained, the representation in the means of phaleristics, thematic anatomical badges and brooches dedicated to the anatomy of the human reproductive and sexual system, of men and women, in all their diversity.

Material and Methods

When writing this research article, its author used such research methods as: search, selection and literary-critical analysis, profile, thematic articles, both in medicine and in phaleristics, related by a common theme - structure/anatomy, and the functioning/physiology of the human reproductive and sexual system, of men and women, primarily in the reflection of such an important collection tool, on thematic, anatomical badges and brooches. All found illustrative materials for this article were automatically converted into screenshot copies, with mandatory and strict recording of the source of borrowing on the Internet, as on specialized Internet pages and websites, in order to comply with copyright requirements.

Results and Discussion

To begin my story about the representation of the human reproductive and sexual system, as reflected by the means of phaleristics, I would like to present a small selection consisting of 7 thematic, anatomical badges dedicated to the male reproductive and reproductive system [3].

Further, in Figure 2, a small selection of thematic, anatomical icons is presented - 20 copies of screenshots, with the general structure of the female reproductive system - the uterus, fallopian tubes, ovaries and vagina.

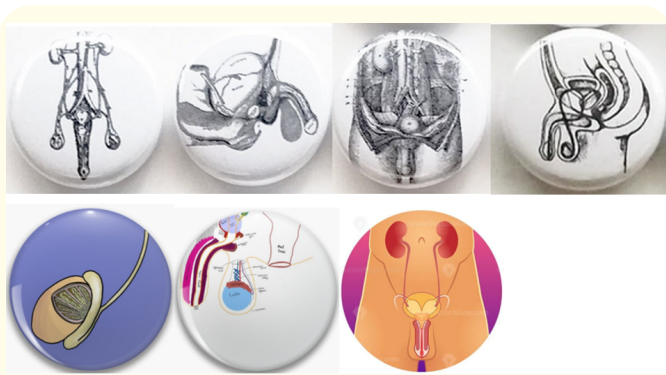

Figure 1: A selection of thematic, anatomical badges dedicated to the male reproductive system.

Figure 2: A selection of thematic, anatomical badges dedicated to the female reproductive system.

The thematic, anatomical selection badges, presented in Figure 3, contains images of the external genitalia of a woman - 4 copies, the vulva - 7 copies, and the clitoris - 4 copies of screenshot copies badges [2,3].

In a large phaleristic anatomical selection, consisting of 38 copies of screenshots of badges, an anatomical image of the uterus is presented, sometimes highlighting the image of the vagina and/ or part of it, as well as the cervix and ovaries – on Figure 4 [1,3-7].

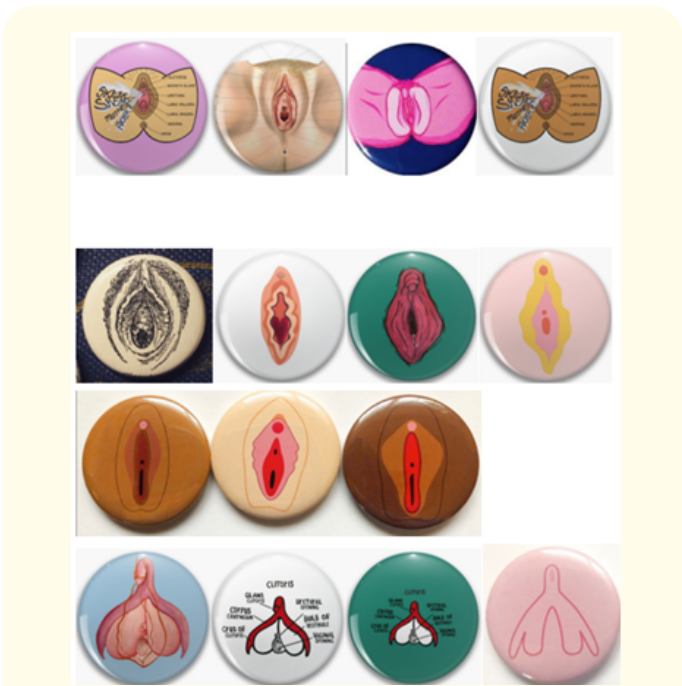

Figure 3: A selection of thematic anatomical icons depicting the external genitalia of a woman.

Figure 4: A selection of thematic anatomical badges, depicting the uterus with its appendages.

Further, in a small phaleristic selection, in Figure 5, thematic icons dedicated to the implantation of the human embryo, its intrauterine development and woman’s pregnancy are presented, in the amount of 15 copies of illustrations - screenshots [3,4].

Figure 5: Thematic badges dedicated to the implantation of the human embryo, its intrauterine development and pregnancy of a woman.

Figure 6 shows a small phaleristic selection, consisting of 8 thematic icons, with an anatomical image of the female mammary gland [3].

Figure 6: The female mammary gland reflected by thematic anatomical badges.

In conclusion of this article, in Figure 7, a small phaleristic selection is presented, consisting of 10 anatomical brooches, depicting the female reproductive organs - the uterus with appendages [1,3,5-7].

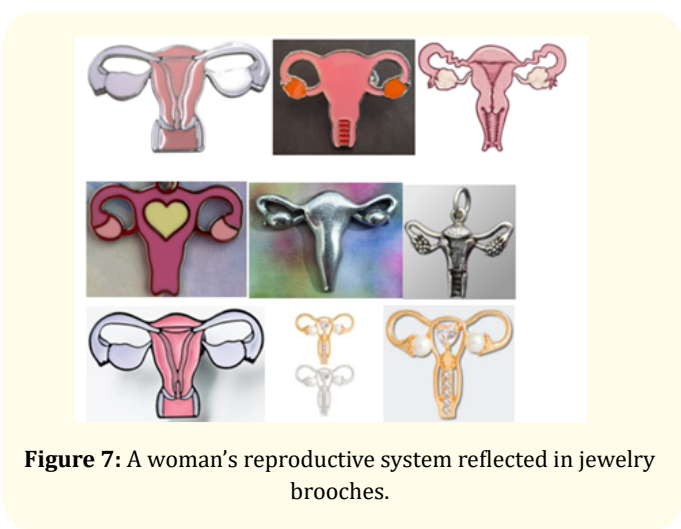

Figure 7: A woman’s reproductive system reflected in jewelry brooches.

This is the end of another original research article. dedicated to the human reproductive and reproductive systems, both men and women.

Conclusions

- In this research article, its author managed to fully achieve the goal of this research work.
- The author’s use, as illustrations in it, of screenshots of a large number of collectible, phaleristic materials, quite brightly, appropriately and creatively, complemented the textual, research materials of this article.

- This research article has significant scientific theoretical and practical value in such areas as collecting (phaleristics), and applied value in the study of many areas of medicine and, in particular, human anatomy, urology and reproductology.
