### Abstract

This author's article presents the results of research carried out by its author, dedicated to reflecting the representation in such a means of collecting as phaleristics, thematic anatomical icons, with images on their front part – the obverse, black and white and color drawings/images, the anatomical structure of the human larynx and its components, in total 40 screenshots of copies of such badges, in the form of illustrations.

**Keywords:** Anatomy; Human Larynx; Badges

### Introduction

Various types of research conducted directly related to human anatomy and medicine are always in demand and relevant. This directly concerns studies related to the reflection of various aspects of human anatomy, in particular: reflections of human anatomy and, directly, the anatomy of the human larynx, in the reflection of such a collecting tool as phaleristics, on thematic, anatomical icons. The author of this article found 40 copies of anatomical icons directly related to the question under study. All copies of anatomical icons found on the Internet were systematized and converted into screenshot copies, which were used by the author of this article, into illustrations that complement and accompany the text of the research materials.

### Aim of study

The purpose of writing this article is to present the materials of the research conducted by the author on the identification, in the Internet, of available materials on the presence in them of thematic badges on the anatomy of the human larynx.

### Material and Methods

When writing this article, the author actively used the method of literary-critical analysis of all available sources of thematic information on the issue under study. First of all, the possibilities of the Internet were used, using Internet sites on collecting on the subject under study. All samples of anatomical badges and breast

decorations found on the Internet, presented in the article, as illustrations, with strict observance of copyright and indicating the web page and email address from which they were borrowed.

### Results and Discussion

This concludes another author's research article devoted to the thematic, anatomical representation of the human larynx on badges. A number of new thematic articles are being prepared on the issues of reflecting anatomy and various human organs and systems on badges. Figure 1 presents a large anatomical, thematic selection of badges, both multicolor and black and white, on the obverse of which the anatomy of the human larynx is depicted, including the anatomical structure of the cartilages, glottis and vocal cords and their place in the topography of this anatomical part of the human throat – total of 26 themed badges [1-7].

In figure 2, a small phaleristic selection of thematic anatomical icons is presented, with an image on their front part of the larynx, highlighting the cartilage, glottis and vocal cords of a person, in the amount of 14 screenshot copies [1-7].

This concludes another author's research article, thematically devoted to the reflection of the anatomy of the human larynx and its component parts, in the reflection of phaleristics, on badges. The author plans a number of new research articles devoted to the anatomy of various organs and systems of the human body, reflecting different means and methods of collecting.

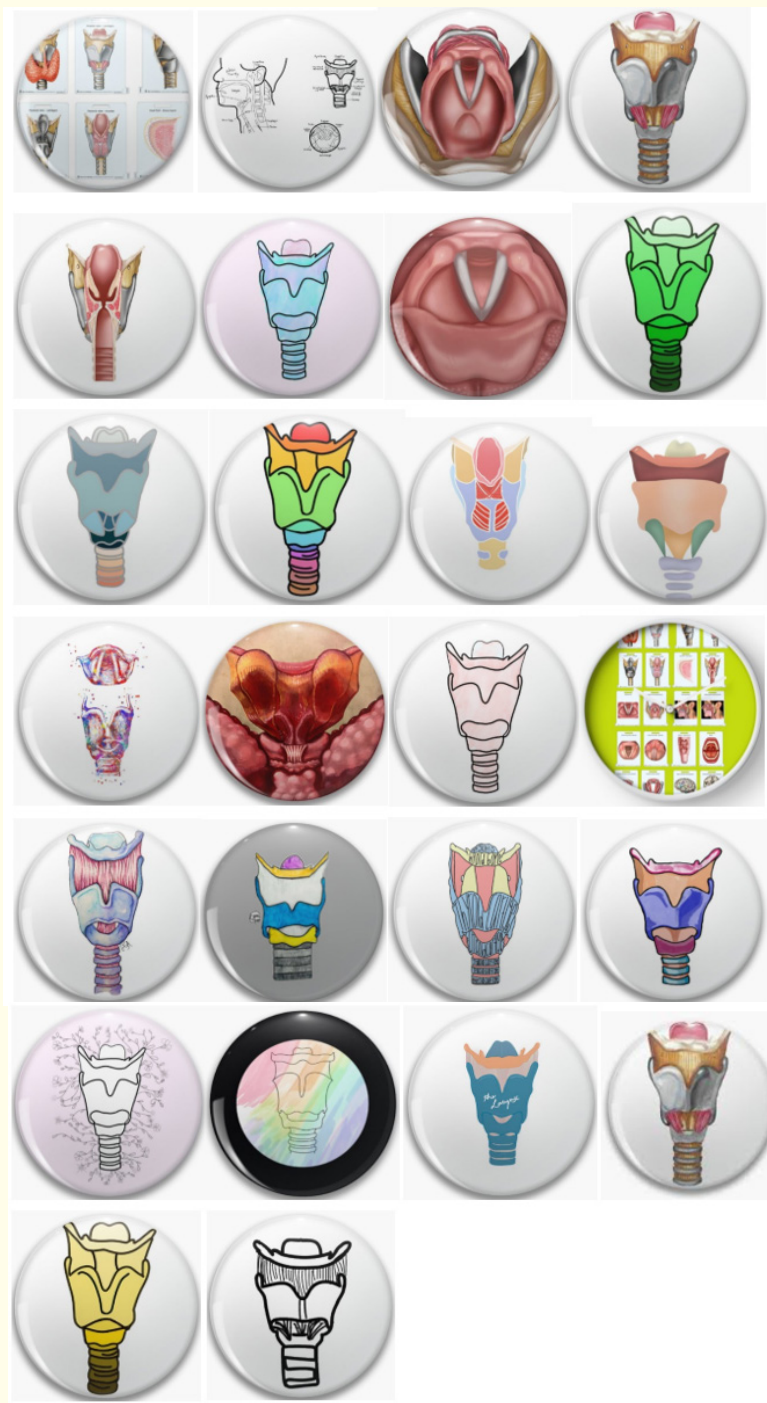

Figure 1: Anatomy of the human larynx as reflected by thematic badges.

Figure 2: Representation of the human larynx, glottis and vocal cords using thematic anatomical badges.

## Conclusions

- In the presented author's research paper, dedicated to the reflection of the human brain and nervous system, in phal-eristics, on thematic badges and jewelry breast decorations - brooches, he fully revealed the topic under study, harmo-niously combining the textual information of the article with bright illustrative material.
- Presented in the form of scanned drawings, numerous the-matic illustrations are appropriate, voluminous and quite informative.
- Research articles of this kind are quite acceptable and ap-propriate, and also able to decorate any medical publication around the world.
