Einstein stated that with the knowledge of people, their egos will come to light even less. We can cheat on our spouses (for men) with the misconception that the alternative partner may be more knowledgeable. The fact that the spouses know each other in the first years of marriage increases the  $1/[AOI]$  value. The marriage period allows spouses to get to know each other better by sharing. Women criticize men's lack of understanding of them. In this case, we can say that a man has never been in a relationship with a woman before in terms of marriage. Men, on the other hand, fall into the misconception that women do not know themselves well as a result of their habits. For this situation, Einstein comes to our rescue with the following explanation. The woman's trying to change the man she marries, and the man's unwillingness to leave his habits brings the end of the marriage. As the man learns information about his wife's family, the behavior to which he is accustomed can predict an even more opposite future. The woman, on the other hand, investigates the man's past to hold the man's family responsible for the wrongs of the man's past. In the end, honesty vanishes when the research intentions of the two histories are at odds. In any country, can then search for the sincerity of the rulers by the voters be a result of the mutual information research that occurs in the family structure?
