Once a patient of molar extraction now a Oral and Maxillofacial Surgeon, life has grown up completing the dream of being a surgeon. The present time is more about outlook. From a normal wiring techniques for traumatic patients and resection of the lesion in cancer patient. The modern treatment plan has changed to mini plates fixation and different reconstruction technique. The present scenario is not only focused to treated the disease, but also on achieving the ideal or near about ideal form. Earlier the esthetically outcome was afforded by the higher society because of cost, now things have been developed cutting down the expenditure. Oral and Maxillofacial surgeon is one among those who can treat for esthetically outcome results. From reconstructing the resected part with fibula graft to normal buccal prominence preservation using root preservation technique. It all can be performed by an oral surgeon. I have always focused for the same. But the importance of the stream has not accepted on the same scale. Research and data are hence required to show the value. So focus have always been to take the sector to a new horizon. There are techniques available which requires supportive data and samples to prove its effectiveness. Also to short out the indications to narrower list to minimize the associated complications. And if at all it occurs how to overcome those complications. If possible to develop a newer one because there is always a ray of hope to be a better one. Set a platform to utilize it. Oral surgeon has opportunities to rise more. It will be nice to join or be part of the groups who are budding to the stream and techniques. To be with suggestions and support to take it to next level.
