For the first twenty two years of this century the horrors of war have been inflicted on any opponent of the world's industrial military complexes. These nuclear armed warmongering nations and their vassals are only enabled by their fossil fuel wealth. Furthermore it is obvious that their machinations can only be stopped by providing the rest of the world with an alternative source of energy. This means cutting off the fossil fuel revenues of these nuclear armed nations. Our world needs energy equality to survive.

Nikola Tesla's electrostatic investigations and subsequent inventions offer the entire world this opportunity. The first necessary application of his world changing technology is the inexpensive dissociation of the carbon dioxide emissions generated by fossil fuel combustion because there is no other way to stop climate change.

In this century, ever increasing fossil fuel consumption and associated carbon dioxide emissions have brought the biosphere of our world to the point where food chains are collapsing.

If it were to come to light that a viable clean replacement technology existed for hydrocarbon energy then the global geopolitical manipulations of the United States of America and the Russian Federation and China, each with their fossil fuel financed industrial military complexes, could actually be ended.

Hundreds of millions of people around the world are already unable to support themselves due to the unprecedented climate change being caused by the global warming results of ever increasing combustion emissions of fossil fuels. Upwards of 10 million people now die each year now from fossil fuel poisoned air, a death rate four times what the Covid-19 pandemic has inflicted on the world over the past two years.

The only possible result of continuing to follow G7 policy plans for what they call 'net zero emissions by 2050' will be the complete collapse of any but the wealthiest nations. The speed at which our global environmental is changing can only mean extinction for much of our natural world. I would ask anyone reading this to think for a moment about what this says about world leadership. My message to you is that there is a simple solution to carbon emissions and the nations that rely on fossil fuels for their global power simply don't want anyone to know about it. If this were not true then what I have found in Tesla's works would not be completely dismissed here in North America without even rudimentary consideration. It has been a hard and so far fruitless attempt to end the suppression of this technology. After several years of effort I still can't find anyone who cares enough about saving our world to even try.

That Dr. Nikola Tesla did not understand nuclear or sub atomic physics is obvious from his later writings. What I am saying is that this is irrelevant to the problem of inexpensively dissociating gas molecules into component atoms. It is only electrostatic forces that bind atoms into molecules and not nuclear forces. The nucleus of atoms was only discovered when Tesla was 60 years old (in 1916) and Tesla patented his ozone generator which so easily dissociates oxygen molecules about twenty years earlier. Tesla patented his electrostatic ozone generator even before the electron was discovered in 1897.

I make no claims other than in my ability as a technical problem solver to deduce his mostly undocumented theory. My practical experience in solving technical problems was acquired over a thirty year career providing technical support for computers and

data communications to mid sized businesses. My every changing work experiences as these systems evolved enabled me to step far enough away from the current dogma of modern electric theory that I could make sense of Dr. Tesla's approach. I have made a thorough examination of the lifelong consistency of Dr. Tesla's rigorous methods and spent several years unlearning enough of what I had been taught about electricity to decipher his underlying concepts. I do claim that I understand how Tesla's unique electrostatic force approach to molecular atomic science actually works.

Instead of the anticipated celebration that there actually is a solution to ending our world wide carbon pollution, I have been met with nothing but outright dismissal. My only conclusion is that anything that will impact the fossil fuel derived economics of North America is simply not to be permitted.

As to G7 plans for solving the global warming crisis through carbon offsets and taxes; these are meaningless political manoeuvres. Their stated plans for planting billions of trees as a solution to sequester fossil fuel emissions is utter nonsense. Just look at the rate of all the worldwide deforestation and illegal logging or the floods and landslides from clear cutting forests. Take a look at the ever worsening storms and how the waters of the oceans are rising. Glacial melting makes mockery of world leadership claims that their pitiful plans have climate change under control. Consider the droughts and the devastation of wildfires affecting so much of our habitable lands each year. To put it simply, following America's G7 fossil fuel driven economic plans will completely destroy our world.

I will gladly show anyone exactly how we can use Tesla's Longitudinal Electric Wave technology to dissociate carbon emissions. My only ask is for someone to take ownership and do this now or at least provide me with the necessary financial resources. The requirements are copper wire and a few other raw materials. Auxiliary apparatus are required to separate and flow the carbon dioxide through the machine and process the resulting gases. I have no workshop which would need to be isolated from 'ground' in order to stay safe. It is also necessary to have a low resistance conduction path connection into the earth, meaning below the local water table. The Earth represents a huge reservoir of negative electric charge and in part Tesla's apparatus acts as pump for electric charge, drawing it up out of the earth like water.

As to understanding Tesla's longitudinal electric wave electrostatic impulse science, you will have to let go of 'curved space-time' relativity physics and put aside the various flavours of quantum theories. Tesla's concept of the 'vacuum' is not an empty void filled with multiple magical mathematical interpretations of numerous energy fields that somehow do not ever interact. The concept of an 'ether gas' was definitely fundamental to all of Tesla's works.

He never directly postulated it as vibrating at twice the speed of light - (as sound energy moves through air). He had been burned too badly over his World Radio Tower project by the powerful financier J.P. Morgan and never published anything along these lines. If he had, it would have belonged to Morgan as that was the deal to get the financing for his Wardenclyffe project funding. Morgan pulled out when Tesla went over budget which in my assessment was Morgan's plan all along. Tesla had agreed that 51% if all future electrical patents for the rest of Tesla's life would belong to Morgan in order to secure the funds. Morgan had lost a lot of money and never forgave Tesla for putting Edison's DC power station franchise system out of business about ten years earlier when his poly phase alternating current transmission lines from Niagara Falls lit up New York city over three hundred miles away. Morgan had vowed that Tesla would never do this again. All of Tesla's later patents are mechanical (hidden analogies to electricity without ever mentioning it). His turbine in particular is meant to be an electrical device with the 'runners' acting as 'brushes' to passing electric charge into the working fluid....)

As to the ether, Tesla did say that the Michelson-Morley experiment attempt to measure the motion of the Earth through the luminous ether likely showed nothing because the ether was in motion. This failure to detect the ether was the basis for the acceptance of Einstein's relativity mathematics.

By the way, although he did build a functioning wireless three tower system here in Quebec, Canada in the 1930s, delivering power to a remote hunting lodge about halfway between two of his transmitters, each about 15 kilometres away, Tesla had given up on trying to get his science accepted. Mostly because Morgan's business practices and what he saw as the lack of humanity in the world because of the first two World Wars (WWI and WWII).

Tesla passed away in the darkest days of the second world war in 1943. He believed to the end that one day his science would have

to be accepted when the world ran out of coal and oil. We certainly have run out time where fossil fuel combustion is a net benefit to the world, were an alternative available.

I do suggest there is a major flaw in our modern interpretation of the physics of the electrical sciences. This flaw was to put mathematics first and ahead of reasoned experimentation. There are an infinite number of algebraic equations or formulas that can fit over any portion of a curve. This being said, it doesn't matter if Tesla's interpretation is also incorrect. His conceptual interpretation of the vacuum enabled his technology and it worked.

Tesla's molecular dissociation apparatus can be more accurately described as a musical instrument where electricity or the electric charge fluid takes the place of air. Tesla considered electrostatic force to be the fundamental force of nature. He found that this force creates all the motions of atomic matter and originates in the 'classical ether', a gas of extreme tenuity that pervades all matter and space.

I am referring here to Tesla's work with the powerful electrostatic forces as enabled by high frequencies and high voltages configured by disruptively discharging the energy stored in capacitors to create extreme rates of change. The closest that modern science seems to come to Tesla's longitudinal electric wave impulse technology (our modern accepted electrical physics insists that longitudinal electric waves do not exist) can only be found in some aspects of modern electric plasma research. The problem I see there is that modern engineering science doesn't seem to know how to safely generate or control a powerful electric plasma without tremendous expense. Tesla's methods easily and inexpensively create the necessary environment with as powerful of alternating electrostatic forces as needed to inexpensively dissociate carbon dioxide or any other gas molecules.

In Tesla's concept, the electrostatic force energy travels through space exactly as sound energy travels. The difference being that sound energy in the atmosphere travels at about 340 metres/sec in the air and not the speed of light. This speed of sound in air is about half of the speed of the vibrating gas molecules that both create our atmosphere and carry the sound energy. Sound energy causes the atmospheric gas molecules to respond and they create zones of molecular compression and rarefaction. The thunder we hear after a lightning strike in a storm is an impulse of this nature.

Similar to sound energy, the electrostatic force energy does the same thing in the vacuum at the speed of light. The lightning flash we see before the thunder is also an impulse. Our atmospheric air, even at sea level is more than 99 percent vacuum by volume. This all means to me that Tesla's extremely tiny ether gas particles must be vibrating or oscillating at about twice as fast as the speed of light to complete the analogy. This of course, if correct would mean that 'Einstein's relativity' is at best an incomplete representation of nature's forces. These tiniest of things that Tesla calls ether gas particles create the fabric of the vacuum and to do so have to move faster than the speed of light, nobody is ever going to actually see them.

If anyone actually wants to do something to save our world from complete environmental collapse, and I believe we really are very close to now or never in regards to the time we have left to take action, I will gladly provide all the details of my investigations into how to use Nikola Tesla's electrostatic science to inexpensively dissociate atmospheric carbon dioxide gas molecules. This technology can be scaled for dealing with the carbon emissions of anything from a car to a jet engine to a coal fired electrical generation plant. All you need to do is agree to freely share the technology with the entire world.

Let the future tell the truth,
and evaluate each one according
to his work and accomplishments.
The present is theirs; the future,
for which I have really worked,
is mine.

Nikola Tesla
