Human beings are ruling over all creatures. We are above all other animals on this planet. Among animals we are so much civilized that we are burying ourselves after death. Like animals' human being has also instincts, but we can control them much better than animals. Unlike animals we are much more driven by reasons and not by instincts [1].

Most animals know from birth what foods to eat and how to eat. Animals main goals all day long are to eat, sleeping, mating. An ant eater looks for ants all day. A bear gets in the water and slaps salmon out.

We spend lot of time thinking of future, past and present. We humans have the ability to quickly learn new technology and use that technology. We can create machines and computers that help us to do work more efficiently. God has gifted us with the ability to think, conceptualize, create, reason, and spiritually connect with Him [1].

Animals are endangered due to the human influence on their environment [2]. Human being is the only species of animal which has kept themselves endangered with the way they are progressing and using of various technologies, polluting the world, increasing the global warming, using more and more pesticides and artificial ripening agents, adulterants in food etc [3].

So, it is need of an hour to go back and think us as animal and focus on the primary need of animals that is eating. Let us re-learn eating properly, eating for living or living longer. Let us build a society of human beings which firstly concentrate on eating, happy living and then think of rest all materialistic achievements with keeping an eye on equal global development and setting formula that this planet belongs to all human beings equally.
