This article shares the future of the “new human” being separated as an autotroph or as another controlled “new human” specie. It demonstrates the trends, and future landmarks that will mark the human specie to only be listed in history books as we enter a new era with changes in our scarce resources of: toxic food and water.

Today, many of us are still human beings, but a part of the population has already evolved to a new specie without even knowing it. They might already be connected to 4-5 devices daily and are living in a virtual world. The genuine strong caveman and woman human with strong jaws and physical survival abilities have already become extinct. However; today our primary existence is evolving quicker than our adaptation. The “new human” specie will be divided into 2 classes. Primarily, autotroph for the rich and wealthy, and another controlled specie that is pre-programmed, and genetically modified. All of these transitions may start with the power of fasting and this is why.

In history, fasting has been used for health and spirituality reasons. However; today we may start to see fasting used as a tool to evolve the mass public population to the “new human” specie. This “new human” specie will have a smaller stomach, be thin, frail, weaker, have less sensory and emotional feeling, be smaller, have larger eyes and consume less energy. It will have no or little emotions and be more or a robotic human that can easily be recharged with electricity, iv’s and chemically induced medicine. It will easily be controlled and fall into certain classes of doing for what the new world needs (for example: workers, creators etc). We may soon see billboards advertising message “ Get your IV food Free, “ Re-charge your nutrients with XYZ Firm” etc...If we look at famous historical people such as: Mahatma Gandhi who fasted for 21 days, or Ram Bahadur Bomjon fasted for 11 months, and Barbieri who fasts for 382

days (The Longest recorded human fast listed in 1971 the Guinness Book Of records), the effects of fasting are the same in all. Fasting was not just used for health, spirituality but it was used to send a message, protest, or to create an awareness. Fasting has been used since the 5th Century BCE, where it was used by Hippocrates to heal patients. Others like Plato, and Socrates fasted for 7-10 days to improve mental and physical performance. Even today, fasting is sought in religious groups, medical field (prior to certain lab exams, blood work or surgeries). In the health field, many people fast to lose weight, or reboots ones metabolism. However; the new future fast, the new fast will determine the future populations ability to survive into the next era.

“The new human” may be forced into a fast, such as kids are forced to get their shots, a fast will be mandatory to prepare people for their iv’s and new nutrients, minerals, chemicals that will be sent via blood. Those who do not partake in the fast, will find it hard to find edible food to survive, or clean water, therefore; their only option of survival is to fast into the new system. At this date the human specie will only be seen in history books, and truly lost. “ The new human” will be controlled, lifeless, and robotic in nature. For this first time in history, may we see the evolution of fasting to force a human evolution of the “new human” specie.

In today’s world, fasting is free and an optional thing to do. For some it is to follow their own beliefs, of the celebrity trends to look good, and re-energize. However; in the future it may be a mass requirement for the mass public to undergo to survive. A special fast may be introduced for the wealthy to become autotrophs, self-sufficient to survive with no external sources of food and water. Their health may be monitored and increased with various other sources such as injections etc...

In conclusion, expect the new future fasts to be more like a pre-programmed medical procedure to begin the evolution of the new human specie for the mass population and the wealthy. Imagine, every child, and parents undergoing special preparatory fasts to prepare them to live xyz programmed years and customize the body, mind and internal organs to adapt to the new era. Iv's of vitamins and nutrients could be our only future remedies of survival with a life governed on fasting and fuelled with natural sun light and water vapor from clouds. The future "new human" would appear to be very thin, frail, physically weak, with change in features such as: larger eyes, smaller ears, mouth, nose, and less senses and feeling. The wealthier would already have their system evolved to be autotroph. They will be self sufficient and do not rely on any external sources. The desire to be an autotroph human will be so intense, because it may be the only way out to survive the new era, however; the cost of survival is unknown and left up to us to start to educate ourselves of past survival methods.
