As a member of the Editorial board of Acta Scientific of Otolaryngology it is a privilege for me give to welcome our lectors to this new edition, where we periodically review problems, aspects, and experiences of specialists in Ear, Nose, Throat, Head and Neck, and Facial Plastic Surgery, and all sub-specialties in adults and pediatric patients.

We want to open opportunities to Otorhinolaryngologists around the world and invite them to write and present studies and cases with the objective to expand our horizons to new techniques, technologies, and share the skills of several ENT Doctors.

The objective is to make a journal that deals with interesting cases, and themes of our daily life where the residents and general Otolaryngologists can get the opportunities needed to advance over common practice sharing and learning about the practical topics of our specialty.

The Editorial Board wants to direct, instruct, and encourage the doctors and residents to show us their skills and abilities, and demonstrate the value of their published work.

I am sure that all Otorhinolaryngologists around of world have an interest to show off or expose special cases of patients or any derivate technique or skill to teach other doctors, as well as talking about your own experience. Here, the Acta Scientific has their doors open for you to grow in our practice.

Over my years of experience, I had to understand step by step my practice with the objective to simplify my knowledge, and easily teach the concepts to do research and to try to create strategies to

get other people to understand and conceptualize what I want to transmit. It is for this reason that we need to integrate professors, fellowships, and residents, who have strong understanding in their concepts and ideas, in order to write articles and provide insight so that other colleagues may learn more than what they may know already, or at the very least, provide a unique perspective on these topics.

And in order for us to learn properly, we need to join our ideas and encourage friendly and honest teamwork, so that we, together, can learn more about the world of medicine and our specialty through our own concepts.

I invite you and all international Otorhinolaryngologists to be part of our team as one force, so that we can do our work better and improve ourselves for the world and our specialty.
