Kim.****Abstract**

New drug development is a long process including laboratory experimentation, animal testing and clinical testing. The normal drug development process cannot be used for viral diseases like COVID-19. Searching for a remedy from current viral medicine which already passed toxicity test could be a shortcut. We searched for a remedy for COVID-19 from the database of Korean traditional herbal medicine with Bio-Resonance System. We found *Adenophora triphylla* and *Puerariae Radix* as potential remedies for COVID-19. *Adenophora triphylla* and *Puerariae Radix* are easy to obtain and very safe. We also found the specific frequencies that resonate with *Adenophora triphylla* and *Puerariae Radix*. Water extraction of *Adenophora triphylla* and *Puerariae Radix* can be directly used for human consumption. *Adenophora triphylla* and *Puerariae Radix* at their corresponding frequencies can be more efficiently used for preventive and therapeutic purposes with new paradigm technology, such as indirect water memory and digital 3D waves expressed in cards or modulated to electricity.

Keywords: COVID-19; *Adenophora triphylla*; *Puerariae Radix*; Water Memory; Digital 3D Wave**Introduction**

Smith and colleagues demonstrated that some people are allergic to electromagnetic waves as well as chemicals [1,2]. They could induce allergic reactions in these people using a signal generator by varying frequencies. They also could find specific frequencies which neutralize allergic reactions. Both allergy inducing and neutralizing frequencies could be transferred to water. Allergic reactions could be inhibited by holding the water vial in the hand or by drinking the water. They showed that electrical and chemical stimuli and the neutralization of allergies are interchangeable.

Benveniste showed that allergic reactions could be induced by the water to which the allergen was memorized by homeopathic infinite dilution [3]. Although there followed many controversies, Benveniste's research was finally confirmed by the double blind research performed by 4 independent European laboratories [4].

Recently Nobel laureate Montagnier performed PCR using pure water to which the DNA wave of HIV was transferred [5,6]. Montagnier could detect electromagnetic signals from the water where the DNA wave was transferred. Montagnier proved that the DNA wave was a physical entity recognized by DNA polymerase. Benveniste and Montagnier already proved that water memory is, in fact, true.

Benveniste proposed that cellular communication could occur by the resonance between the waves of hormone and receptor molecules. Benveniste believed that direct molecular collisions, like billiard balls between receptors and hormones, cannot explain such a fast biological reaction [7].

Benveniste further digitized the molecular signal by passing white noise to water and recording it with a sound blaster card in the range of 20 - 20000 Hz [7]. Benveniste showed that playing re-

cordings of the electromagnetic signals of molecules could trigger cellular signal transduction.

Recently Kim showed that the molecular signal of P53, which is a strong tumor suppressor, could be imprinted to ceramic balls including magnetite and molecular signals of P53 imprinted to ceramic balls could be indirectly transferred to water [8]. Kim expressed the molecular signal as a '3D wave' as it decreases thermodynamic entropy and forms a 3D field similar to the original molecule. Kim could digitize the 3D wave of the substance by passing light to a transparent cuvette where the 3D wave of the substance was imprinted [9]. Captured images with light sensors could be copied and modified with a graphical program. Computer-stored digitized images can be expressed on a two-dimensional surface such as paper or a card using a printer with toner that includes a liquid magnet. The expressed 2D image could induce the same physiological reaction as that of the original substance. The molecular signal called '3D wave' by Kim is another expression of the 'pilot wave' by de Broglie and is suggested to be faster than the speed of light and thus exists in imaginary space [10].

We searched the database of Korean traditional herbal medicine with applied kinesiology techniques to find the substances inhibiting COVID-19. We found that *Adenophora triphylla* and arrowroot could neutralize the energy of COVID-19. We also found specific frequencies corresponding to *Adenophora triphylla* and arrowroot which can neutralize energy of COVID-19. *Adenophora triphylla* and arrowroot can be extracted with hot water and used for direct human consumption. Other than drinking the water extract of *Adenophora triphylla* and arrowroot, we propose new paradigm approaches using indirect water memory and digitized 3D waves expressed on a 2D surface as a card or modulated to electricity.

Searching for herbal medicine suppressing COVID-19

The 3D wave of the substance is proposed to be in imaginary space and thus is connected to the original substance through holographic space. According to holographic theory, even the picture of the substance is connected to the original substance [9]. With an EM picture of the COVID-19 coronavirus, we could search the substances which suppress COVID-19 from the database of Korean traditional herbal medicine using Bio-Resonance System (BRS) which analyze interaction between substance and human

autonomic nerve system [11]. BRS sent very weak electricity to human and measure the resonance by changes in skin resistance. BRS showed over 95% degree of confidence.

We found that both *Adenophora triphylla* and *Puerariae Radix* could neutralize COVID-19, respectively. A one to one mixture (weight ratio) of *Adenophora triphylla* and *Puerariae Radix* was most effective in suppressing COVID-19. A mixture of *Adenophora triphylla* and *Puerariae Radix* could be extracted with hot water and could be used for preventive and therapeutic purposes against COVID-19.

Searching for frequencies resonating with *Adenophora triphylla* and *Puerariae Radix*

Most spectroscopic methods use resonance of the stretching, rotating, vibrational or transition characteristics of the substance. Benveniste suggested that every substance has a unique resonating frequency as a whole at an extremely low frequency [7]. We searched for the frequency that resonated with *Adenophora triphylla* and *Puerariae Radix* with a signal generator using BRS. The frequency for the *Adenophora triphylla* is 40.96 Hz and for *Puerariae Radix* is 40.81 Hz. A one to one mixture of *Adenophora triphylla* and *Puerariae Radix* showed 40.95 Hz which was most effective to suppress COVID-19.

Indirect water memory

A 40.95 Hz frequency was generated to the water extract of *Adenophora triphylla* and arrowroot. The water extract at 40.95 Hz could be activated and transferred to ceramic balls generating hydrogen rich alkaline reduced water (UM, meaning "Healing Mineral" in Korean) including magnetite using a homemade imprinting machine generating 7.8 Hz which is known to be an earth frequency [8]. A subtle magnetic field of 5mG was generated with the 7.8 Hz frequency around the input container where a coil is wrapped around to activate the substance. An activated 3D wave of *Adenophora triphylla* and *Puerariae Radix* at a 40.95 Hz frequency could be transferred to UM. The 3D wave of *Adenophora triphylla* and *Puerariae Radix* and at a 40.95 Hz frequency imprinted to UM could be indirectly transferred to water. UM water was shown to lower glucose, cholesterol and triglyceride level in blood. UM water showed an antioxidant effect and enhance immunity [11,12]. UM water even showed anti-cancer effects [12]. UM water imprinted with the 3D wave of *Adenophora triphylla* and *Puerariae Radix* with

40.95Hz frequency could be effective for the preventive and therapeutic purpose against COVID-19.

Digitization

Laser light (red or green-colored) is passed to a transparent quartz cuvette containing the 3D wave of *Adenophora triphylla* and *Puerariae Radix* and the frequency of 40.95Hz. Laser light passing through the quartz cuvette containing water could be digitized by capturing it with a light sensor [9]. Such digitized images could be copied and modified with a graphical program. Computer-stored digitized images could be expressed in flat surface such as card (UN, meaning Healing Energy in Korean) by the printer with toner containing a liquid magnet. We could confirm that a 3D field of *Adenophora triphylla* and *Puerariae Radix* formed around the UN card using an applied kinesiology technique. We could also expect that the energy of COVID-19 would be neutralized around the person carrying the card.

Modulation to electricity

Condensers are known to accumulate 3D waves as well as electricity. 3D waves of *Adenophora triphylla* and *Puerariae Radix* at a 40.95 Hz frequency could be transferred to a condenser using an imprinting machine at a frequency of 7.8 Hz. Digitized 2D images of *Adenophora triphylla* and *Puerariae Radix* expressed in elastic paper could be wrapped around the condenser [9]. This condenser could be installed with an electrical plug (UL, meaning Healing Electricity in Korean). By inserting an UL plug into an electrical outlet, 3D waves of *Adenophora triphylla* and *Puerariae Radix* at a 40.95Hz frequency could be spread throughout the electrical line's route to create an environment free of COVID-19.

Discussion and Conclusion

New drug development is a long process including laboratory experimentation, animal testing and clinical testing. The normal drug development process cannot be used for viral diseases like COVID-19. Searching for remedy from current viral medicines or traditional herbal medicine whose safety has already been confirmed could be a shortcut. For example, remdesivir is a drug for Ebola, but is recently found to be effective for COVID-19 [14]. The frequency for remdesivir is 40.87Hz which is near to the frequency of *Adenophora triphylla* and *Puerariae Radix* which is 40.95Hz. Most of the remedy candidates for COVID-19 is near 40.95Hz.

Searching for resonance frequency of the substance could be a new effective approach finding effective medicine.

We searched for a remedy for COVID-19 from the database of Korean traditional herbal medicines using BRS and found *Adenophora triphylla* and *Puerariae Radix* to be possible solutions. *Adenophora triphylla* and *Puerariae Radix* are very easy to obtain and very safe. *Adenophora triphylla* and *Puerariae Radix* were traditionally extracted with hot water and could be used for direct human consumption against COVID-19.

Use of *Adenophora triphylla* and *Puerariae Radix* with their corresponding frequencies can be more effectively used for preventive and therapeutic purposes against COVID-19 with new paradigm technology, such as indirect water memory and digital 3D waves expressed in a card or modulated to electricity.

UM is a mixture of ceramic balls producing hydrogen rich alkaline water. 3D wave of *Adenophora triphylla* and *Puerariae Radix* and with corresponding frequency could be transferred to UM. The UM to which 3D wave of *Adenophora triphylla* and *Puerariae Radix* imprinted with corresponding frequency could be an effective therapy against COVID-19. UM water itself showed anti-oxidant and immunity enhancing effect. It also showed anti-diabetic effect and anti-cancer effect. UM with 3D wave of *Adenophora triphylla* and *Puerariae Radix* and with corresponding frequency could be an ideal solution to COVID-19.

The UN card with digitized 3D wave of *Adenophora triphylla* and *Puerariae Radix* and with corresponding frequency forms 3D field suppressing COVID-19 around card. By carrying UN card on human body COVID-19 will be suppressed. UL with digitized 3D wave of *Adenophora triphylla* and *Puerariae Radix* and with corresponding frequency creates COVID-19 suppressing environment throughout the electrical line's route.

Drinking UM water and carrying UN card on human body and residing in virus free environment by UL could be an ideal approach against COVID-19.

Use of new paradigm science for preventive and therapeutic purposes is already practically applied. There are even sites (www.remedies-numeriques.com; www.icmedical.org) from which people can download the digital file corresponding to specific medi-

cally effective substances. Downloaded digital files of a substance can be stored to a CD. The 3D field of the substance formed around the CD can be transferred to water by putting the water bottle on the CD for 30 minutes.

The effect of the new paradigm approach against COVID-19 in this research is not yet proved clinically. However, each step of the new paradigm approach was already proved. Further researches to prove their efficacies are expected.
