Dear all

I am very thankful to the team AS pharmacology and the Acta scientific for giving me opportunity as editor for the journal. I will like to put light on some facts that I learn.

Humans are always trying to reach at the certain end of any task or the work they think about. In world of science no task is always complete one. As we go beyond anything it will show us new path and endless journey starts.

We all known scientists and researchers are always doing the task by thinking beyond. Everyone has its own choice and subject to go beyond and think. I chose neuroscience as my basic topic as I started thinking about human brains, its working style and complicated neuronal paths, one spark of light strikes in mind suggesting work in neuroscience but to start with the brain and neuroscience is to find the needle at bottom of the sea. After sharpening the view of thinking I choose the convulsion disease as my path for journey and made it a topic for my research.

Here while writing the editorial to our great journal I will like to request all the upcoming eminent scientists and researchers to participate and contribute with more and more ideas to serve humanity, to solve problems, to conquer diseases, to find solutions to problems and to serve humans in pain or having disease as well as healthy once. With the motivation as "one life is equal to one earth".

And as pharmacologist, I will request and suggest you all to work for decreasing side effects, adverse effects of drugs with tool of newer molecules as well as ancient Indian knowledge. I will also like to put light that we all have to work on ideas till it becomes beneficial to mankind and environment.

Assets from publication with us

- Prompt Acknowledgement after receiving the article
- Thorough Double blinded peer review
- Rapid Publication
- Issue of Publication Certificate
- High visibility of your Published work
