Glaucoma is a very common ocular disorder it is a kind of visual threatening disease therefore its early diagnosis and prompt management is very important to ensure safety of vision problem with glaucoma is whatever vision is lost can't be restored so whatever vision is left has to be saved by anti-glaucoma medication and various surgical modalities be it laser or open surgery.

At present with recent advances in ophthalmology we have now glaucoma subspeciality so the prognosis of this disorder is satisfactory and also we have new glaucoma medications.

Also there is a kind of glaucoma screening which picks up silent cases of glaucoma prostaglandin analogue eye drops is one of the new anti-glaucoma medication.

However, we should know its long term side effects they are

- Conjunctival hyperemia
- Conjunctival congestion
- Blepharitis.
- Allergic conjunctivitis
- Allergic blepharon conjunctivitis
- Dry eye

- Trichomegaly
- Periocular pigmentation
- Iris pigmentation
- Loss of periorbital fat
- Cystoid macular odema.
