Therapeutic drugs are singular drug and mean medicine and the word “drug” is used primarily to refer to potential pharmaceutical preparations during the development of industry in general to be used to reduce the spread of disease. Therapeutic drugs for human or veterinary clinical medicine have received significant attention in non-scientific media, societal interest, therapeutic breakthroughs, therapeutic needs, drug marketing, and drug regulatory policies worldwide.

The therapeutic drug industry has a number of unusual properties that make it very different from what people usually think of as easy and simple. It is also an industry full of difficulties and risks, although the pharmaceutical industry has for a long time contributed to human well-being and health and spared suffering from diseases. It is worth noting that this industry is one of the least trusted industries, and it is often negatively compared to the nuclear industry alike. The pharmaceutical industry is also one of the most risky industries as it requires a lot of capital, yet it is seen by the general public as highly profitable.

Big pharma promotes itself as a research-based industry, yet most people think they spend more on marketing than on research. Therapeutic drug industry is being developed to meet all human needs for good health and that, when developed, is given to all on the basis of need.
