The meditational research and near-death experience research conducted by a team of scientists, doctors and divine mentor led them to theorize the existence of Electromagnetic Radiation of the human mind (EMR-hm) or Electromagnetic Energy of the human mind (EME-hm) [1]. The EME-hm or EMR-hm works on the principles of particle physics and quantum mechanics. It also works wirelessly like the EMR of the smart phones, texting, router and Wi-Fi. The electric current flowing through the neurons in the magnetic field of the brain generates the EME.

These authors have characterized the EME-hm as non-ionizing radiation which falls in the same region of the EME spectrum as the EME of iphone, router, Wi-Fi, and texting. The discovery of EME-hm holds infinite promise in developing new technology and product in detecting the EME-hm and how it varies with the positive and negative actions of the human. There exists the need for fabricating an instrument that can detect, measure and quantitate the intensity of EME-hm at basal state and its rise and fall with and without PWM.

The EME-hm plays a significant role in explaining all life events of human from conception to death. It can explain the causes of human sufferings. It may also predict the occurrence of human sufferings. There is ample evidence in the literature of the beneficial effect of prayer, worship and meditation (PWM) on the recovery from medical illness [2-7]. However, the mechanism of action of PWM on the positive effect on medical illness was unknown until now. The people attributed this beneficial effect of PWM on recovery from medical illness to 'medical miracle'. We propose that the beneficial effect of PWM on positive outcome of medical illness is a therapeutic effect mediated through EME-hm.

The EME-hm can be expressed by the following equation

$$E\text{-hm} = M\text{-hm} \times V\text{-hm squared}$$

Where E-hm = Energy of human mind,

M-hm = Mass of human mind assuming

Mind is the atom of consciousness.

V-hm = Velocity of human mind.

The EME of the human mind is so powerful that it not only plays a role in recovering from medical illness, but it also plays an important role in the following events of human life:

1. In maintaining the entire human life from conception to death,
2. In causing disease, disability, and death (3 D's),
3. In establishing bonding between human beings – between loved ones, between less-loved ones and between non-loved ones,
4. In causing human happiness, unhappiness and sufferings and
5. In making people rich and poor
6. In making people educated and not educated.

Every second of human life, EME flows through human mind. With PWM, this EME or EMR increases in intensity thus causing beneficial effect on the recovery from illness – in this case regression of brain tumor [7] and recovery from septic shock [6].

The human being is composed of three parts – Body, Mind, and Soul. So far we knew the mechanism of formation of the physical

body through the science of Embryology, Physiology, Biochemistry and Biophysics. We did not know how the Mind and Soul are formed at conception. We propose that the mind and soul are formed by the science of particle physics and Quantum Mechanics. During physical union of father and mother, the EME-hm of father and mother collide each other to form a third energy which forms the mind of the child. The mind of the child is thus the mirror image of the minds of the parents.

We name the physics particles responsible for the formation of mind and soul at conception as 'mene' and 'sene' respectively to conform with the name 'gene' which is responsible for the formation of physical body of human being.

In conclusion the knowledge of EME-hm would be of great benefit to humankind in understanding the formation of human body, mind and soul, mechanics of human life and in understanding the mechanism of therapeutic action of prayer, worship and meditation in recovery from medical illness.
