Abstract

A case is reported here demonstrating the beneficial effect of worship, prayer and meditation (WPM) on recovery from sepsis secondary to small pox infection.

Keywords: Prayer; Meditation; Sepsis

Case Report

A 15-year-old boy had small pox infection. The family refused admission to the hospital and treated the patient at home by house called doctor. After going through the macular phase and papular phase of the disease with fever and rash, the patient went into sepsis during the pustular phase of the disease. At this stage the patient fell into semicomatose state for 21 days with ups and downs on vital signs. The doctor predicted that the patient was not going to make it.

The family particularly the father of the patient started WPM daily for three to four weeks. After three weeks the patient gradually started regaining full consciousness.

DISCUSSION: There are reports in the literature [1-3] of the beneficial effect of WPM on recovery from different kinds of illnesses. Reported here is an example of beneficial effect of WPM on recovery from sepsis – which was otherwise declared fatal by the doctor. The mechanism of action of beneficial effect of WPM on recovery from illness is mediated through the electromagnetic energy of the

Conclusion

This is another example of beneficial effect of WPM on recovery from illness – sepsis in this case.
